A HISTORY
of the
CHICAGO SECTION
of the
AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS

I. Activities of Chicago Section - 1893 to 1902

The American Institute of Electrical Engineers was founded in 1884 with headquarters in New York. By 1893, it had 673 members, the major part of whom lived in the larger cities of the United States. At the time of the World's Fair in Chicago in 1893, there was a demand for meetings outside of New York in some of the larger cities. On this account, a committee was appointed to consider the holding of such meetings in some of these larger cities. Late in 1893 a plan was adopted providing for the appointment by the Council of a Local Honorary Secretary in any city upon petition of 20 or more members and authorizing the holding of local meetings in any city where such an official had been appointed. Such meetings were to be held simultaneously with the Institute meetings in New York or afterward for the purpose of discussing papers accepted by the Institute. The local members were to elect their own chairman, usually a different one for each meeting. The committee recommended against the creation of any separate local organizations. The method of having each local organization represented by a Local Honorary Secretary is still adhered to in foreign countries where sections are not authorized.

In February 1894, Mr. Edward Caldwell of Chicago sent petitions, signed by 21 members, to the Institute in New York requesting meetings in Chicago. Each copy had a place at the bottom to fill in the name of the member recommended for Local Honorary Secretary. Mr. Caldwell was recommended by a large majority, and he was appointed by the Council.

On March 21, 1894, a meeting was held at Armour Institute, simultaneously with a meeting in New York and Mr. A.S. Hibbard of the Chicago Telephone Company was elected Chairman in Chicago for this first meeting. D.C. Jackson, Sr., read a paper by Professor W.A. Anthony entitled, "On the Effect of Heavy Gases in the Chamber of an Incandescent Lamp." A report on the meeting and discussion of the Anthony paper can be found in Trans., April 1894, pp. 186-191.

Other meetings were held in 1894 on the following dates:

The second meeting was held April 25. Lieutenant Samuel Rodman, Jr. acted as Chairman.

The third meeting was held May 23, 1894.

At the September meeting held on the 19th, Mr. B.J. Arnold's appointment of Local Honorary Secretary was announced.

Meetings were held in Chicago on this basis until the Chicago Section was formed under a new plan, like the present one, in 1902. However, in the list of sections, Chicago has the date of establishment as 1893 and no other section was established prior to 1902.

It is possible that the World's Fair had some influence in hastening the establishment of the Chicago Section because many meetings were held here at that time in connection with the International Electrical Congress, which was attended by many New York members. It seems that Mr. Edwin J. Houston, after attending the I.E.C., read a paper in New York on September 20, 1893. The subject was "International Electrical Congress and World's Fair of 1893." He was greatly impressed by the growth of the nation west of the Hudson River, but was most impressed by what he called "that extra-mural younger potentially greater Chicago called the Great White City." He was most profuse in hi

Local Honary Secretaries - 1893 to 1903

1893 - 1894	Edward Caldwell
1894 - 1895	B. J. Arnold
1895 - 1896	Wilbur M. Stine
1896 - 1897	Wilbur M. Stine
1897 - 1898	Richard H. Price
1898 - 1899	Richard H. Price
1899 - 1900	Richard H. Price

descriptions, praise of the City, and the World's Fair and particularly in the advances made in the nine years from 1884, the time of the International Electrical Exhibition in Philadelphia, till 1893. It is quite likely that this paper had some influence on the conservative members of the Council of the Institute in New York.

At the Anthony meeting of March 21, 1894, referred to above, the Chicago meeting was connected by telephone with the Institute rooms in New York, the telephone connections having been arranged by Mr. A.S. Hibbard general manager of the Chicago Telephone Company and Chairman of the meeting. This appears to have been the first regular Institute meeting held in Chicago and almost amounted to a joint meeting with New York. There were approximately 45 members and guests present. The discussion was probably held on the same evening.

At the second meeting held on April 25, 1894, Mr. I.H. Farnham, probably of the Boston Telephone Company, read a paper on "Electrolytic Effects."

The subject of the third meeting held on May 23, 1894, was "Dis-

Papers by some Chicago Members in 1902 - 03

The "Telephonic Status Quo" by Arthur Vaughan Abbott, Chief Engineer, Chicago Telephone Company, was read in both Chicago and New York. The meetings in Chicago were mostly discussions of papers previously given in New York and convention papers. The subjects considered were, Electric Elevators, Illumination, Telephony, and Electric Pneumatic Systems. In addition to these, Mr. B.J. Arnold read a paper on the "Relative Cost of Steam and Electric Railway Operation." It is interesting to note that some attention was also paid at this time to the Education of Electrical Engineers.

In 1901 - 1902 - 1903, the Chicago Section was very active in several different lines of electric development. Mr. J.G. Wray, Chicago Telephone Company, presented a paper on "Telephone Traffic" and S.G. McHearn, Central Union Telephone Company, presented a paper on "The Telephone Engineer." Peter Junkersfeld, Chicago Edison Company, presented a paper on "Multiple vs. Independent Operation of Units and of Central Stations." Louis A. Ferguson, Chicago Edison Company, presented a paper on "Distribution of Electrical Energy in Large Cities." Both, this paper and that of Peter Junkersfeld, were read and discussed both in New York and Chicago. There was also considerable discussion about 25 and 60 cycle currents and arguments for two-phase vs. three phase distribution. Standards were given much attention in 1903, particularly of E.M.F. Electric railways received considerable attention and high tension transmission lines with their lightning arrears and ground wires. No one appeared to be satisfied with his existing knowledge and eagerly sought to learn from the experience of others. This characteristic of the human race has always been one of its

About this time, Steinmetz introduced his paper on the "General Equations of the Electric Circuit." This paper was presented at the 25th Annual Convention and made quite a stir at the time because it greatly simplified the solution of problems which before had been rather long and intricate.

In 1910, Mr. H.B. Gear presented a paper before the Chicago Section on "The Diversity Factor in Chicago." This factor has been studied quite diligently since that time and is admittedly of considerable importance in loading generating stations.

Mr. Arthur Bessey Smith of the Automatic Electric Company, had an article on "The Automatic Telephone in Relation to City Service." This telephone operated on the "step-by-step" principle and was largely used by independent telephone companies for several years in many of the smaller and medium sized cities of the United States and in foreign countries.

About 1906, a students' Branch of A.I.E.E. was formed at Armour Institute under the Chicago Section and a similar Branch at Lewis Institute in 1908. These two branches were consolidated into one when Armour and Lewis Institutes "joined hands" in 1940. A third branch was formed at Northwestern University about this time but information concerning the exact date is not available.

In 1911, the 28th Annual Convention of the Institute (A.I.E.E.) was held in Chicago, June 26-30. This was the second meeting of the Institute in Chicago, the first having been held here in 1892. Since 1911 Chicago has been host to the following General meetings of the Institute:

Summer - 1924, 1933, 1942

Fall - 1947

Metering of electric energy was studied and a paper was presented to the Chicago Section about 1903 by John D. Nies, then a member of the Faculty of Lewis Institute and Design Engineer for the Kimble Electric Company. Then there were comparisons between electric motors and steam locomotives for railway operation. For this purpose, the Metropolitan Elevated using electric power and the South Side Elevated using, at that time, steam locomotives, were used as typical examples. Needless to say, from an economy standpoint the electric railway was the winner of the contest.

Voltages as high as 6000 volts for transmission were discussed and suspension type insulators were recommended for these high tension lines. Also single-phase power transmission for railways was considered and discussed as being especially suitable for this purpose because of its adaptability for regeneration of power for braking on down grades or when coming to a stop, and also because of its use of series motors.

During this period, wireless telegraphy received attention and Lee De Forest and others became active. It is the opinion of the writer that no electric development prior to this time had ever attracted as much public interest as wireless telegraphy. This was something every youngster could work at as long as it remained simple. In 1908, Fessenden presented a paper on "Wireless Telephony." This paper brought up a controversy between Congress and the Administration concerning protection of patentees against infringement. Congress passed the bill but President Theodore Roosevelt refused to sign it although he was strongly urged to do so by members of the Cabinet. The bill must have become a law without the President's signature but it still remains for the patentee to prove the validity of the patent

ENGINEERING SOCIETIES OF AMERICA,

[Compiled from a Table prepared by Prof. J. B. Johnson of St. Louis, Dec. 21, 1892.]

Its membership is not geographically restricted as its title implies, but members are accepted from all parts of the world and number 540, a large proportion of whom are probably not members of any other society. This society has also permitted the establishment of what is known as "the chemical section" within its own ranks, and jurisdiction, being practically an independent organization, meeting on different nights and having a distinct set of officers and rules.

A table is given herewith showing the relative numerical strength of these various societies. It will be seen that all of the minor societies hold more frequent meetings than two of the largest national societies. This table is incomplete, especially as regards local electrical societies and clubs, and the membership statistics have not been brought down to this date. It is given as an instructive example of the tendency of the times.

There can be no doubt in the mind of any reasonable man that some plan should be devised by which this demand for local meetings can be provided for. How to attain this desired end; how to reach and interest distant members; how to make each member feel that he has value received in return for the money invested; how to make the INSTITUTE the leading technical society in the country; these are a few of the problems that your Secretary invites you to consider and assist him in solving.

MR. R. W. POPE:—As this paper has been presented in advance, and is now in your hands, instead of reading it in full I propose to utilize my time by reading a portion of the communications I have received, after which I would be pleased to have Dr. Emery open the discussion. I did not learn until yesterday that the American Chemical Society, which is not included in the printed list, had been reorganized on a basis of local sections, something as is suggested in the paper. Dr. C. A. Doremus, one of our own members, is on their committee on membership, and I sent over to him for a copy of the constitution and by-laws of the American Chemical Society. His letter in reply to mine is of interest.

CORRESPONDENCE.

[FROM DR. C. A. DOREMUS.]

About two years ago, to meet the demands of chemists throughout the country, the American Chemical Society was re-organized on a basis very nearly like that of the British Society of Chemical Industry. As the society is now organized, there is a general council and officers elected each year at the general meeting, which, owing to the fact that the society is incorporated under the laws of the State of New York, is of necessity held in this city. There is also a board of directors. The voting is done by ballot and in part by proxy, but the chief point is that all sections of the country are represented in the general management. The society has now several local sections, the New York, Rhode Island, Washington and Cincinnati, and I think Brooklyn also. The meetings of these sections are, of course, held at the respective points, but the papers read are published in the journal of the society, of which Prof. Edward Hart, of Easton, Pa., is the editor. Of course, by this method it is impossible to have discussions of the papers presented, but after all, this does not seem to be so absolutely necessary. Since adopting this form of organization the society's influence and membership have greatly increased. As Chairman of the Committee on Admissions I signed to-day 33 applications for membership from chemists in every part of the country.

For the past year or so we have held one general meeting outside of New York. The Congress at Chicago was very successful. I regret very much that a previous engagement which I could not break prevents my being present this evening at the meeting of the Institute; but I am quite certain that any step taken in the direction of that which you propose will be followed by a vastly increased influence of this body, both in the science and practice of electrical engineering.

New York City, October 18, 1893.

[FROM A. J. BLOOR, SECRETARY NEW YORK CHAPTER, AMERICAN INSTITUTE OF ARCHITECTS.]

Yours of yesterday is before me. Having been active in the formation of the Chapter system, and in the correspondence leading to it, I can tell you, in general terms, that it was adopted after much discussion, as the best means of utilizing in the interest of the architectural profession and in the most effective way, the centralizing and separative—the individualistic and federalistic—in short the centripetal and centrifugal forces and tendencies which underlie, in various degrees of distribution, all human effort, in common seemingly with every department of mental and mechanical dynamics in the universe. Our chapter system is analogous to the political system prevailing between our Federal Government and the various states, and it is necessarily

adopted in this country for all important fraternities, secular or religious, and for all large schemes of commerce and finance. I may add that our initiative has served, as an example, for several of the architectural brotherhoods of Europe; and that when several years ago, the Western Association of Architects was consolidated with our Institute, the Chapter system was perpetuated under the vote of a very large majority, notwithstanding the efforts of a faction more intent on personal aggrandizement than on altruistic practices.

New York City, September 26th, 1893.

[FROM MR. GEORGE HILL.]

The problem that is correctly stated, usually contains in that statement an indication of its correct solution. In the paper by Mr. Pope, we have a statement of a problem that has not only been affecting the AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS, but every other national technical body, practically since their organization.

It is eminently right and proper that the headquarters of a national institution should be in some one of the great centres of population. At the same time it is a necessity that there should be in other of the great centres, and many of the lesser centres of population and especially in those smaller manufacturing towns where the industries are largely concentrated, many men of the same profession who are anxious to meet their fellow workers for the interchange of ideas, and the advantages which flow therefrom.

The history of the American Society of Civil Engineers, and the growth of associations of similar interest in different parts of the country not associated with it, indicate an unfortunate line of development, which may serve as a warning for the INSTITUTE. On the other hand, the number of papers read at the Civil Engineers and the discussions evolved thereby, show that the profession in New York is fully alive to the advantages flowing therefrom, and as a consequence, not monthly meetings, but semi-monthly meetings were held and are well attended. The civil engineers, however, have but one meeting place, and the need for technical societies elsewhere has developed other local societies whose membership is 57 per cent. of that of the national societies. This may be taken to represent the alternative which will follow from a refusal of the INSTITUTE to sanction meetings in places other than New York. On the other hand we have the unsatisfactory nature of the Engineering Congress at Chicago, as indicating in a measure what might happen were the INSTITUTE to authorize meetings in different places for the discussion of papers simultaneously discussed in New York. That is to say the volume of discussion would be so great that it would be exceedingly difficult to avoid burdensome repetition in the discussion, and serious offense if

each man did not have his discussion printed in full in the *TRANSACTIONS*, losing him as a possible discussor of other papers. A further disadvantage would be in the extremely limited number of papers which would be read during the year. In electricity, the field is so extremely wide, the various matters requiring attention so numerous, that there is practically no limit to the number of subjects available for papers that could be discussed with advantage, while the acquisition of data is so great, that in many cases yearly publication of papers on the same subject would be extremely interesting.

Should we then attempt to discuss at any one meeting all of the papers submitted by an active earnest membership, with a dozen different branches scattered through the country, we should have either a mass of discussion which would not be advantageous by reason of its repetition, or a single discussion of each paper.

While the plan adopted at the World's Congress was defective by reason of the fact that discussions in the various sections were going on simultaneously, it seems to me that it contains the germ of the solution of the problem, which would follow in the general lines laid down by Mr. Martin, and to which Mr. Pope calls attention on page 507. That is to say, the *INSTITUTE* would have a number of sections, but departing from the suggestion in other particulars.

The plan that I would advise would be :—

First. The establishment of a series of sections wherever a number of members of the *INSTITUTE*, say a dozen, were willing to meet regularly.

Second. The discussion by them at any one meeting of some one of the papers submitted for reading at this meeting as may be determined upon by a vote of the membership of the section.

Third. Should any member of a section desire to discuss a paper, which his section does not care to discuss, he can present his discussion to the New York section, where it would be embodied in the discussion printed in the *TRANSACTIONS*. The question of a meeting room would be simply solved, since in every town sufficiently large to have one dozen or more members of the *INSTITUTE* there would be some place for the advancement of science, which could be availed of at a nominal expense. For reporting the proceedings the members attending the section could no doubt arrange with a stenographer for what would be a nominal sum for each one of them, but a considerable sum to the stenographer to be present once a month for the purpose of a report.

The operation then would be, that papers would be submitted to the Council as at present, but it would be necessary to have the Committee on Papers divided into sections so that the papers submitted could be promptly passed upon. They would be sent out for publication two months before being read instead of one month as at present. This would give sufficient time for the preparation of a careful discussion where desired. It would also en-

able the membership to determine each month the paper that they desired to discuss next month, and then secure the concentration of any one section on some particular paper.

Concerning the subject of papers, it seems to me as though the sub-division adopted of pure theory, theory and practice, and pure practice, is in its fundamental principles good. Reviewing briefly the papers that have been presented during the past year, there are only two or three that have been of any practical use to me because my work is entirely with buildings, and my interest in electricity is that of using the most convenient of all possible forms for the distribution of energy. I cannot try experiments; I can only attempt to give my client those things that are sanctioned by the best of present practice. Therefore, the papers that interest me are those connected with the generation of current for lighting, heating, elevating, ventilating, etc. Methods, therefore of generation and distribution, possess a vital interest, and papers like Mr. Hering's, Mr. Marks', Mr. Moore's and others of a similar nature are of great use to me when brought to a practical issue. Papers however on Hedgehog transformers and condensers, while of ultimate value as bringing into use methods which may prove economical in the future, are not of present and immediate value. Still, as I am only one of nearly 800, I cannot complain, because the interests of others must be considered. If however, we could have a dozen papers each month, there would no doubt be one every month that would be of value to me.

Another point that would be served by a subdivision would be an economizing of time. Such papers as those of Mr. Moore and Mr. L. B. Marks, are of very great value beyond a doubt. At the same time not having reached the commercial basis, they, I think, properly belong to the realm of theory, and were they classified as such, those circumstanced similarly to myself, would be saved the time necessary to read them, because the amount of reading that we must necessarily do in order to keep posted with those things that are of immediate value is so great as to be burdensome, and it is therefore very desirable to avoid adding to it by going through papers which, although intensely interesting, are not necessary for the successful prosecution of our work.

As an illustration of the desirability of allowing more time to elapse between publications of the papers and the meeting, I may state that through no fault of the committee I feel very sure, I only obtained the *TRANSACTIONS* on the morning of the 18th and by sending specially for it, a copy of Mr. Pope's paper on the 17th. This gave an insufficient amount of time to prepare a discussion thereof, which should be in all of its branches well considered, and this must be my excuse for not presenting my views in better shape.

In conclusion, while I do not entirely agree with any of the suggestions made, I am so convinced of the importance of carry-

ing out some one of them, that no matter what can be agreed upon by members of the INSTITUTE, it may be assured of my hearty support. No plan that may be adopted after such discussion as has been heard can fail to be valuable, and it is only a question of degree that is involved.

New York City, Oct. 18th, 1893.

[FROM MR. CHARLES P. STEINMETZ.]

After returning from New York last month I reported to the next meeting of the Thomson Scientific Club that the sentiment of the AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS was, in general, favorable to the establishment of local meetings in Lynn. In consequence thereof a Committee was appointed by the Thomson Scientific Club, consisting of the following members of the INSTITUTE: Mr. Chas. P. Steinmetz, Chairman; Dr. Louis Bell, Mr. H. F. Parshall, Mr. J. P. B. Fiske and Mr. Franklin Sheble, to investigate the feasibility of organizing a local branch of the AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS in connection with the Thomson Scientific Club, also to draw up necessary papers for presentation to the INSTITUTE as an expression of opinion of the Thomson Scientific Club with regard to consolidation, and to lay the report before the Club before submitting it to the INSTITUTE. The Committee has not reported yet and so we cannot bring this matter before this meeting of the INSTITUTE.

I will say, however, that the sentiment of the Club is in general agreement with the views expressed in your paper.

If years ago the INSTITUTE had offered any inducement for local meetings probably most of the local organizations would not have come into existence. Now, however, where there are local organizations I think the INSTITUTE should recognize the existence of these organizations and not start meetings independently, but in connection with, or in consolidation with, such organizations—as here in Lynn with the Thomson Scientific Club.

The risk that the number of papers printed in the TRANSACTIONS would increase does not exist at all since anybody who wants to communicate a paper to the INSTITUTE does this anyway whether he is able to go to the meeting or not, and no paper read before the local meeting would be printed in the TRANSACTIONS which has not passed the Editing Committee of the INSTITUTE in the regular way. Naturally many papers read before the local branches will not be communicated for printing in the TRANSACTIONS. At least in local organizations like that in Lynn which does a considerable work of an educational nature, many papers are read which are valuable and of interest to the hearers, but are not intended by the author for publication in the TRANSACTIONS. These papers would neither be sent in to the Editing Committee

nor printed in the TRANSACTIONS; and papers worth printing in the TRANSACTIONS written by the members of the INSTITUTE are I hope at least, even now not withheld from the INSTITUTE by the absence of the author, so that I cannot see how the size of the TRANSACTIONS could possibly be increased by having the local meetings.

It will hardly be necessary (in many cases not even practicable) to have the local meetings simultaneous with the New York meeting. A communication between simultaneous meetings will be generally excluded anyway by the time difference. For instance when the Chicago meeting starts a discussion the New York meeting is probably ready to adjourn.

Besides, local organizations having social and educational tendencies will frequently have more meetings,—the Lynn organization, for instance, has during the season two meetings per month. These meetings may continue in the same number as the local meetings.

Lynn, Mass., Oct. 17th, 1893.

[FROM MR. F. A. BOWMAN.]

I have read with great interest your paper on "Monthly Meetings" and entirely agree with you as to the importance of bringing the work of the INSTITUTE more forcibly to the notice of the members distant from New York. With the membership covering the area it now does, a comparatively small number can take personal part in the discussions and a great number are simply subscribers to a technical periodical. A reference to the by-laws of the Canadian Society of Civil Engineers will show a complete scheme for the formation of branches and the discussion of papers at different centres. One branch at least has been formed under these regulations. If some scheme of this kind for "sections" or "branches" were granted I think it would materially add to the number and variety of the papers offered. Members would take a more personal interest in the INSTITUTE, and would write papers on the various problems they would have to meet and overcome in their work. The number of theoretical papers would not be less and the number of practical ones considerably increased. As all papers would have to pass the Council before being read, only those of real value would come before the INSTITUTE. If I understand the objects of the society aright there is room in the TRANSACTIONS not only for the splendid theoretical papers which do appear there, but also for papers on the practical questions encountered by electrical engineers every day. Why should we not have a paper from Mr. Blank on the plant he installed in such a mine, the difficulties he met with and the means he used to overcome them, with a few figures of costs. Or another member has erected plants all over the country, could he not give us a short paper on "poles," what woods he found most

suitable in different localities, their relative life, etc. A glance at a years transactions of the Institution of Civil Engineers shows that they contain not only large and important papers by leading engineers, but also many smaller ones describing engineering works or giving a few notes on some material used. It seems to me if the INSTITUTE is to take and hold the foremost position in the electrical world that it is entitled to, that the scope of its papers must be widened, and that one of the best means to this end is to increase the personal interest of the members by bringing the papers and discussions nearer home to them in some such way as has been suggested.

New Glasgow, N. S., October 24, 1893.

[FROM MR. A. E. KENNELLY.]

Many thanks for your letter of yesterday and for the paper accompanying it, which I have read with interest. Here is a scheme that appears feasible to me, and I wonder how it will appear to you:

When, say more than 15 members are resident in any city, an appointment on application can be made of one of them as Local Honorary Secretary. To these local honorary secretaries the INSTITUTE can provide advance sheets of the papers, to the desired number, thus closing the attitude of the INSTITUTE to those cities. If the members in Cincinnati say, receiving these advance sheets, like to meet together and discuss the papers, why so much the better; but their elections to the chair, their actions and resolutions will be entirely their own and in no way officially connected with the INSTITUTE. Written discussions upon the papers forwarded to the Secretary of the INSTITUTE, either directly or through the local honorary secretaries, would receive the attention of the Editing Committee, but they would be received as emanations from the members and not from the local union association, gathering or chapter which they might form.

This plan would enable distant members to participate in the benefits of the papers and meetings of the INSTITUTE, but would prohibit the possibility of any official action in any chapter detrimental to the interests of the main body or headquarters.

Orange, N. J., October 17, 1893.

DISCUSSION.

THE PRESIDENT:—We would be pleased to have Dr. Emery open the discussion.

DR. EMERY:—Mr. Chairman, in a previous discussion of this subject various difficulties were pointed out, one of the most important of which was that referred to by Prof. Houston, our present President, as to the qualifications of members of the local societies who would naturally wish in case of consolidation to be called members of the INSTITUTE. Some of the difficulties which have been referred to will be overcome by the suggestion in the paper that the out-of-town meetings will simply be sections of the meetings here and discuss the same papers. There are, however, other suggestions in the paper which I wish to criticise for reasons to be stated, and finally offer a substitute for consideration. The paper speaks of having the local members who were not members of the INSTITUTE known simply as "auditors." It is believed that after a little consideration it will be seen that the local societies will wish some recognition, at least among themselves, of an entirely different character. There must be positions for the leaders of the local ruling classes rewarded by the customary evidences of local respect which keeps all organizations alive. To accomplish this without infringing on the rights of our own members, it is in my opinion necessary to encourage rather than discourage the formation of local societies, which may have to a certain extent their own aims and purposes, social and professional, under the control of their own officers and yet regularly hold meetings as chapters of the INSTITUTE under such rules as the INSTITUTE may prescribe. Without taking the time at this late hour to fully state all the considerations, I proceed at once to read a draft of some resolutions I wish to submit for reference in the proper direction, and which I trust will aid in directing the discussion to the details of a desirable plan instead of to the more general considerations of advisability on one hand and the difficulties to be encountered on the other. My suggestions are as follows:

Skeleton of Resolutions Designed to Authorize the Formation of Local Chapters of the American Institute of Electrical Engineers.

1. The Council may in accordance with the several terms of these resolutions, upon proper application, grant privileges to form local chapters of the INSTITUTE to hold meetings as sections of those of the INSTITUTE, and to read and discuss papers presented at the regular meetings of the INSTITUTE held in the city of New York.

2. A local society is to be formed preliminarily with at least 25 members with a name distinctively different from that of the INSTITUTE, preferably that of the——Electrical Society. Such local society shall have as members at least 10 charter

members of the INSTITUTE, and such society shall through a committee formed of a majority of charter members of the INSTITUTE make application to the Council of the AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS, for proper authority to form a chapter under the conditions of these resolutions. Societies already formed with a name and membership in accordance with the above requirements may also make application the same as if formed for the purpose.

3. Before making the application the local society is to organize under its local name and pass a constitution and by-laws providing for the conditions herein required and which are in other respects to be satisfactory to the Council of the INSTITUTE.

4. The fees prescribed for such organization to be separated into two classes, (a) a specified amount for the support of any local work of said organization, which is to be prosecuted independently of the work of the INSTITUTE; (b) a specified amount (but little less than that required for INSTITUTE membership), which is to be transferred after the chapter is formed to the Treasury of the INSTITUTE. A part of the latter to be applied to the publications of the TRANSACTIONS of the INSTITUTE and the remainder returned to the credit of the local treasurer to be used under the direction of the local board to pay the expenses of the chapter so far as the same are chargeable on INSTITUTE account. The local fund to be drawn upon for all matters not strictly relating to the work of the INSTITUTE.

5. The membership of the local body shall consist of three classes. (1) Local charter members of the AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS who shall also be entered as members of the local society and pay class (a) dues. (2) Associated members of the local society or those who pay a sufficient sum into the local fund to entitle them to the local privileges as well as to the TRANSACTIONS of the AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS and the right to participate in the discussions. (3) Members of the local society who shall have the privilege of attending its meetings, but shall have no right to participate in the published discussions of the INSTITUTE papers or to copies of such papers.

6. The Council of the INSTITUTE after inspection of the petition, the constitution and by-laws, the list of members and the representations of the committee, may in their discretion issue authority to such committee to form a chapter in accordance with the terms of these resolutions, to be known as the Chapter of AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS. The chapter to be organized with a local president, vice-president and secretary, all of which shall be charter members of the INSTITUTE. After the first year a vice-president of the society shall be elected as the local president.

7. The local officers of the INSTITUTE thus appointed shall report their appointment to the Council and thereafter meetings

of the chapter may be held locally under the direction of charter members of the INSTITUTE subject to the direction of the Council of the INSTITUTE; the papers read at the meeting of the INSTITUTE may be read by proxy in the local chapter and discussed, and a report of the discussions sent to the Secretary to be embodied with that of the INSTITUTE meetings and of other chapters. When the associated members of the local society take part in the discussions they shall be distinguished in the printed discussion as members of the local society.

8. The Council to have power to make preliminary rules and regulations necessary to carry the spirit of these resolutions into effect and to submit from time to time for the consideration of the INSTITUTE such further resolutions as in their opinion seem necessary.

Gentlemen, there are a great many reasons for the various provisions I have made which I cannot state at so late an hour. I will only call attention to the fact that the chapters must be self-sustaining and cannot be a burden on the membership at large. I therefore provide that the local dues which entitle certain of the local members to copies of the proceedings of the INSTITUTE and the right to join in the discussions must be nearly as large as those paid by INSTITUTE members. This should have the effect to bring the treasury balance on the right side. It is believed also that it will have the further effect of increasing the regular membership of the INSTITUTE, for such of the members of the local societies as are qualified to become members of the INSTITUTE will naturally prefer to pay a little higher dues than to be simply "associated members" of the local society and so distinguished in the reports of the discussions. If those who have taken the pains to examine the various objections that have been made will also examine carefully the resolutions I now propose, I think much will be found which will prove of value in arriving at a solution of the problems, and without further remarks I hand my suggestions to the Secretary.

MR. WEBB—I should like to make two or three remarks before we close and to introduce a resolution. This question appears to be approaching the condition of what we might call the "silver bill" of the INSTITUTE. It has been discussed already many times in Council meetings, and members of the Council individually have thought over it and considered it. It has been brought up at the general meetings and also at a special meeting in Chicago, and on that occasion I dare say you remember that Mr. Pece, one of our honorary members, spoke on the subject, and the gist of his remarks was an argument for centralization. We are rather apt to look abroad for precedents in settling difficult points in the conduct of our scientific societies, because the societies over there are much older than most of ours. But the conditions in this coun-

try are entirely different, and in a great many cases we cannot be guided by foreign practice; this is a case where we have got to meet the conditions that confront us, without any regard to precedents. I think it is quite natural that where there are a number of members of the INSTITUTE in a city which is so far away from the headquarters that they cannot attend the meetings, that they should desire to hold meetings themselves, and that as they are members of the INSTITUTE they should want to hold those meetings in the name of the INSTITUTE. It seems to me a very natural desire, and at the same time it is equally natural that here, in the calm climate of headquarters, we should see a great many dangers and difficulties in the way of those meetings being carried on. There are a great many practical difficulties that occur in the handling of such meetings. Dr. Emery's very carefully thought out scheme providing for chapters, points out one of the dangers right away—that we may have so many chapters that they will burst our binding. We may have so many chapters that in a very short time they will break up the INSTITUTE, and that is just the risk that we want to avoid most scrupulously. I think this subject is one that requires very thorough consideration and very deliberate action on the part of the INSTITUTE, and I will just read this resolution that a few of us who take great interest in the matter have drafted, to see if it meets the approval of the members present:

Whereas, Requests and suggestions have been received from members in various parts of the country looking to the holding of local meetings for the reading and discussion of papers; and

Whereas, It is the sense of this meeting that any measures proposed with a view of increasing the usefulness of the INSTITUTE to its distant members should have earnest consideration and careful action; it is hereby

Resolved, That the President be requested to appoint from the Council a committee to consider the subject of local meetings, such committee to be supplied with copies of all correspondence and papers on the subject in the files of the Secretary, and that the Council report as early as possible to a monthly meeting of the INSTITUTE: first, upon the expediency of local meetings; and second, if they deem such meetings expedient, to recommend a suitable plan for the organization of local meetings and for their proper relation to the general body.

MR. PHELPS:—I move the adoption of that resolution. And if I may be permitted at the same time, move that the very suggestive paper of Dr. Emery be referred to that committee for consideration.

[The motion was carried.]

THE PRESIDENT:—Of how many shall it consist?

MR. WEBB:—That is left to the discretion of the chair.

MR. PHELPS:—I move that it be made five.

[The motion was carried.]

THE PRESIDENT:—The Chair appoints Mr. Webb, Mr. Phelps, Mr. Hammer, Mr. Kennelly and Dr. Pupin.

[Adjourned.]

A BRIEF GLANCE AT ELECTRICITY IN MEDICINE.¹

BY DR. W. J. MORTON.

It is, I confess, with considerable trepidation that I, a physician, touch upon electricity before an audience whose life work this subject is; but if there be one reason more than another why I esteem it a high honor and a privilege to address the members of this society upon the subject assigned to me, that of electricity in medicine, it is that I look upon the occasion as one which may serve to interest electrical engineers—experts in electricity—in the efforts which medical men are making, in these modern days of electrical science, to ascertain the possibilities of electricity to cure disease. Our certainties we ever have with us; they are a legacy from the fathers of science; it is the limitations that can be set to our knowledge that we would ascertain. And if by chance these limitations, like the horizon of an otherwise boundless plain, ever keep in advance of our pursuit, we have, nevertheless, left behind us an abiding knowledge of the new ground we have traversed.

In one sense a similar problem continually confronts the members of your own profession; you have your grand dynamos and the laws of economical distribution of power and light; you have your telegraph system, already pretty well worked out to its limits; you have your subtle telephone and telautograph, but you have also a thousand and one problems, whose limitations have yet to be determined. You have yet to run a train one hundred miles an hour; yet to distribute power and light on a Teslaic system without conductors; yet to make a practical telephone talk out loud; yet

¹ By the action of Council in ordering the publication of this paper, the original Editing Committee, George A. Hamilton, Chairman, Franklin L. Pope and Francis B. Crocker, is relieved of all responsibility in the matter.

This year marks the centennial anniversary of the founding of our Chicago Section. During the World's Columbian Exposition of 1893, discussions were held addressing the need for holding meetings outside of New York resulting in the appointment of a local honorary secretary representing the interests of Chicago members. Shortly afterwards, technical meetings were held—a practice that continues today.

At 6:30 p.m. on Saturday, October 9, 1993, the Chicago Section will host a celebration of our first 100 years. The festivities will take place at the Museum of Science and Industry, 57th Street and Lake Shore Drive, Chicago.

During a cocktail reception, IEEE members and guests will enjoy after hours access to the Museum's seven galleries commemorating the 1893 World's Columbian Exposition "Building MSI:1893 to the 21st Century", selected exhibits, and the Chicago Sections' historical documents and displays.

The Rotunda, decorated with historical banners, will be the setting for the centennial dinner, keynote speech, and awards presentation. After dinner and the presentation, guests are encouraged to continue enjoying the selected displays at the Museum. The Museum will remain open until 11:00 p.m.

Shortly after the celebration, a centennial book will be published commemorating the event. It will be sent to all IEEE Chicago Section members.

This evening has been planned to be memorable and we extend an invitation to you to attend. Tickets are available at \$50 each from the IEEE Chicago office. An envelope and card are enclosed for your convenience.

We look forward to seeing you the evening of October 9 for your journey into history.

Sincerely,

The Centennial Celebration Committee

Mr. Francis Cox

Dear Mr. Cox:

History of the Chicago Section

On behalf of the Chicago Section, please accept our thanks for providing us with the factual, historical data of the beginnings of the Chicago Section which you prepared and presented at a Fall General Meeting, held in Chicago, in 1956.

Also thank you for a reference (AIEE Transactions, April 1894, pages 186-191) evidencing the Chicago Section's activity prior to 1902 as requested by Mr. John J. Anderson, who is the IEEE Staff Member responsible for AIEE Historical Data.

Thank you again for your major contribution to our Diamond Anniversary celebration this year.

Kind personal regards and best wishes.

Very truly yours,

George C. Spisak

George C. Spisak,
Vice Chairman,
IEEE, Chicago Section

MONTHLY MEETINGS OF THE INSTITUTE.

THEIR ORIGIN AND PROPOSED DEVELOPMENT.

BY RALPH W. POPE.

INTRODUCTION.

Now that the membership of the INSTITUTE has become so widespread, accompanied by the natural tendency to increase most rapidly in cities, the question of holding meetings at different points in the country is assuming marked importance. The recent revival of this subject is largely due to a discussion¹ which took place at the annual meeting, May 16th, 1893. Attention was called at that time to the fact, that Council had already considered the advisability of the holding of meetings in other cities than New York, but that nothing had been accomplished, due largely to the failure on the part of any number of members to express a desire that such meetings be held. In order that the details of this movement may be properly understood, as well as to correct erroneous impressions that have arisen, owing to lack of information upon the subject, the writer has undertaken to prepare this paper. His familiarity with the history of the INSTITUTE, as well as the practice of similar national organizations, must be his excuse for undertaking the work.

RULES REGARDING MEETINGS.

In the organization of the INSTITUTE, the rules of the American Institute of Mining Engineers were very closely followed, and provision was made for one annual and two regular meetings. The Rules also provide for the holding of special meetings, as follows:

"Special meetings may be called whenever the Council sees fit; and the Secretary shall call a special meeting on a requisition signed by fifteen or more members." [See Rule 6.]

EARLY SUGGESTIONS.

The immediate predecessor of the writer in the office of Secretary, Mr. T. C. Martin, in his remarks at the annual meeting, May 19th, 1885, when the INSTITUTE was but twelve months old, called attention to this rule:

"Several of the members in New York," he said, "have written to me and have objected to the infrequency of the meetings held during the year. They say that the members ought to be brought together in New York oftener, that papers might be presented and read, and that the New York members might form a branch or sub-section of the society, and they think that the society would be greatly strengthened by some such step as that, but it will be seen that Rule 6 makes no provision at all for any meetings of that nature, except that they shall be called whenever the Council sees fit, and that the Secretary shall call such a meeting on a requisition signed by fifteen or more members. It seems to me that the society would derive great benefit from occasional meetings of the New York members."

No action was taken upon this suggestion, although at the same meeting, a committee for the revision of the Rules was appointed, which reported at a special meeting called for the purpose, December 8th, 1885. At this meeting the following six members were present: the late Major Michaelis, the late Sidney F. Shelbourne, John Bogart, Henry B. Slater, Joseph Wetzler and the writer. The outlook for meetings of any kind at that time was decidedly gloomy.

THE MOVEMENT CHECKED, BUT NOT ABANDONED.

Matters moved along in practically the same groove until the next annual meeting, held May 18th, 1886. The following is a quotation from the report of your present Secretary, who had then held office for one year:

"The importance of the various electrical problems which are continually being brought to public notice, points to the advisability of holding monthly meetings, for the discussion of current topics. There are in New York and vicinity a sufficient number of members to make such meetings successful, especially if those who are capable, and have had ample electrical experience will perform their duty in the preparation of suitable papers for presentation on such occasions. I can see no reason why such a gathering might not be held monthly, in conjunction

¹ Transactions, vol. X, p. 305.

"with the regular meetings of Council, under existing arrangements. A suggestion of this kind was made by my immediate predecessor, but not having been acted upon, I feel it my duty to state that I consider something of this kind absolutely essential to the future prosperity of the INSTITUTE, and earnestly recommend that the matter be taken up at this meeting. If possible, I should be glad to see at least six members or associates now appointed, who should in turn present suitable papers for discussion on such occasions. At least one meeting of this character might be held early in June, and upon its success would depend the arrangements for future gatherings. I have already been promised a paper for this purpose, and it is very probable that gentlemen who could not comply with our request to submit papers at the present time, will be glad to do so at a more convenient season. It also appears probable that if suitable arrangements were made for reporting the proceedings of these meetings, many important electrical papers would be brought before the INSTITUTE, which are presented to other societies, although perhaps entirely foreign to their special field. This is largely the result of a popular interest in electrical researches now existing, which we should avail ourselves of to stimulate the growth of the INSTITUTE.

"With the inauguration of such a policy as I have outlined, your Secretary will feel far better satisfied with his work, and the existence of the INSTITUTE will gradually become more generally known, and properly appreciated by those for whose benefit it was founded."

Notwithstanding this suggestion, there appears to have been a disposition to take up the consideration of that weighty and inexhaustive topic, which has haunted technical societies for many years, viz:—"A Universal Wire-Gauge." After a discussion which left the wire-gauge question exactly where it stands to-day, excepting that three or four new gauges have since been added, Mr. Mailloux availed himself of a lapse in the proceedings to call attention to the Secretary's recommendation in the following words:

"Has anybody taken up that suggestion about the monthly meetings? It strikes me we ought not to let an important matter like that pass by. There is quite a sentiment in favor of that project in the body of the institution, and I must say, for my part, that I favor it greatly. I believe in spreading the light all we can and keeping the INSTITUTE awake, and I do not think there is anything that could conduce more than monthly meetings to awakening a general interest in electrical matters, not only among the members, but with the general electrical public. I know that abroad it is customary for societies to meet oftener than three or four times a year. You almost for-

"get that you have been there after three months and forget acquaintances that you make. Then again the frequency of meeting should be made to excite interest in certain matters and perhaps to replenish the literature of electricity to a certain extent. People do not have time to write and elaborate their ideas and let others have the benefit of them, but if they have a chance to come together once a month, or once in two months and exchange ideas, I have no doubt that friction would have a tendency to benefit us all and keep us bright. In that way we would provoke discussion, which is healthy for us all, and at the same time we are producing material that is subsequently published and is going to be beneficial. It will help to supply a long felt want in literature."

I do not know that Mr. Mailloux has ever made any pretensions at being a prophet, but he certainly gave promise of being a statesman. The matter was laid aside however, and the irrepressible wire-gauge topic was again recognized. Then the question of the title of Past-President was discussed, and time was apparently slipping away, judging from the tone of the following remarks which bear evidence of impatience on the part of the Secretary.

"I know it is getting late and perhaps some of the members are tired, but I do not want to see the meeting slip away without taking some action on the monthly meeting business. I have no desire to see action taken on it merely as a matter of form. There are monthly meetings and monthly meetings. The New York Electrical Society has monthly meetings, and with a larger membership than ours, the meetings are not as well attended as they should be, and it is very often the case that meetings of this kind lack interest, and for that lack of interest members do not come. If they came, there would be interest, and if there was interest they would come. This a question that has been discussed I presume in every society that has been organized in New York City. But there is one thing about New York City that appears to operate against the success of evening meetings, and that is this gap which intervenes between office hours and eight o'clock. It is a good while to eat dinner in, and it is hardly sufficient time to go home and return in; I have talked to different members of the INSTITUTE about a plan by which we could meet at some down-town or up town hotel, making arrangements for a monthly supper. If we stay we have to buy our supper anyhow. We could get the hotel to furnish a room for discussion. We could meet there at six o'clock and take supper or dinner and the meeting could convene at half past seven. We can all be there and get through the work in decent season. That would also give an opportunity for those who wish to dine at home in preference to

"remaining in the city, to go home and get back with the assurance that there will be a quorum when they return. I believe that by this means and by the appointment of one of our members to present a paper for discussion—not necessarily a very elaborate paper, but simply sufficient to bring up points for discussion, that we may have very interesting meetings. We stand very differently from some other societies. For instance, there is the Telephone Exchange, and the National Electric Light Association—societies which are devoted to special branches of electrical work. They supply topics enough to bring half a-dozen papers before a meeting, on their practical branch; while we cover the whole field and consequently we have a vast range of subjects to choose from, and most of our members are competent to discuss many features of all of them. I merely present this outline as a matter for your consideration, for I believe it is essential to the welfare of the INSTITUTE that we should get together oftener than once a year, and become acquainted with each other and make our existence manifest."

The matter terminated at this meeting by the appointment of a committee of three on motion of Mr. Mailloux, to consider the subject and report on the following day. This committee was comprised of Messrs. C. O. Mailloux, R. W. Pope and Geo. M. Phelps, Jr.

A STARTING POINT.

The report of this committee accepted on the following day, May 19th, 1886, was as follows:

"The committee on monthly meetings respectfully report that they consider such an arrangement desirable, and recommend that they be authorized to formulate a plan for such report, subject to the approval of the Council. In the judgment of the committee it would seem advisable that these monthly meetings be held at the same time and place as the Council meeting, and they would recommend that the next Council meeting, on the first Tuesday in June, be set as the date of this first meeting, at which the committee can then report on a more detailed plan."

"Resolved:—That the committee on monthly meetings be and is hereby authorized to make arrangements for such gatherings as may be considered for the best interests of the INSTITUTE, and their action be reported to the Council at its next meeting for approval."

The late Mr. Shelbourne feared that as summer was approaching the plan might fail. In the discussion he said:

"Of course, I believe in these monthly meetings, and I believe

"in organizing them and carrying out that plan as soon as practicable. But we are just on the edge of summer, when everybody goes out of town, and people prefer to loll on verandas with palm-leaf fans in their hands to getting together in meetings. I think that if we are going to have undue haste in this matter, perhaps we will defeat the very object we are trying to promote."

The Secretary however feared to let go his hold, and again came to the support of a measure which seemed continually eluding his grasp, hence his reply:

"Mr. Shelbourne has brought up the very point in regard to it that I mentioned in my report, that is, that unless we have a meeting the first of June, it would be well to lay it over until autumn, and it was for that very purpose it was brought up, that we might have simply one, in order to start it before summer, for fear that so long a time would intervene before the next one, that instead of undue haste we would have undue negligence, perhaps."

THE FIRST SPECIAL "MONTHLY" MEETING.

Following the plan thus outlined, the first special meeting was held on June 8th, 1886, at which about 30 members were present. In calling the meeting to order, in the restaurant of the Mills Building, 15 Broad St., President Franklin L. Pope spoke as follows:

"It gives me very much pleasure to see so large an attendance on this occasion, the first of our monthly meetings, and it affords us excellent encouragement as to what we may expect in the future. It is an old maxim that we should always attend to business before pleasure. I think we have put in an hour of good solid business, and I had hoped that we should next have the pleasure of listening to a paper on the subject of Incandescent Lighting from Central Stations, by Mr. H. M. Byllesby of the Westinghouse Electric Company; but Mr. Byllesby has unfortunately become entangled in a complication of business that has come up during the past few days, which has occupied his time so fully that he is unable to be present, and in order, therefore, that the meeting may not be disappointed, we have asked Dr. Otto A. Moses, to favor us with his presence this evening, and to make a few remarks on the same subject, with which he is as you all know, very familiar. Dr. Moses has very kindly responded to our request at considerable inconvenience to himself, and will now open the discussion."

AUTHORITY GRANTED BY COUNCIL.

This meeting was followed by others held on December 7, 1886, Feb. 6, and March 15, 1887.

According to the minutes of Council these meetings were authorized as follows :

“ November 16, 1886.

The Secretary, from the Committee on Monthly Meetings reported that Mr. Martin had offered to prepare a paper upon the application of electricity to street railways and that it was desirable that Council authorize the holding of a special meeting in accordance with the by-laws.

On motion of Mr. Shelbourne it was voted that the Committee on Monthly Meetings be authorized to act at its discretion in the calling of such a meeting with full power as to place and circumstances.”

“ January 11, 1887.

The Committee on Monthly Meetings was authorized to call another special meeting in February to be accompanied by a dinner and the Secretary was authorized to provide for its being stenographically reported.”

“ March 8th, 1887.

The Committee on Monthly Meetings reported that they had had in view an excursion to Plainfield in lieu of the March meeting, but that it was decided that it was not expedient at present, and it was agreed that a meeting and dinner should be held at Cable's restaurant on March 15th.”

This was the last meeting of that season.

On October 2nd, the Council appointed a Committee on Papers and Meetings, since which date arrangements for all meetings have been made by the Committee in co-operation with the Secretary.

The following is an extract from the Introduction to the fourth volume of the TRANSACTIONS :

“ The rapidly extending field of electrical industry has developed a corresponding growth of scientific electrical research, “ and acting upon the supposition that beneficial results would “ follow a straightforward attempt to encourage the inter- “ change of ideas upon the electrical questions of the hour, the “ Council has, during the past year, appointed more frequent “ meetings, the records of which are now published in full. The “ good effects of this policy have been manifest, not only in the “ steady numerical growth of membership, but in the widespread “ recognition of the scientific standing of the INSTITUTE as a body. “ Some of the most distinguished electrical engineers of the world “ have appeared before it, and the thoughts of its members have “ been stimulated to renewed activity by the information elicited “ during the various discussions which have taken place.”

THE MEETINGS CONTINUED REGULARLY.

The season 1887-88 marked the regular appointment of meetings, which were held monthly from September 20th, 1887 to

April 10th, 1888 with the single exception of the night of the great blizzard, March 12th, 1888, when stenographer Ryan waited in vain for even a glimpse of the Secretary, who had spent the day watching a new window thermometer at his home in the snowbound city of Elizabeth, N. J. The paper scheduled for that evening did not materialize until February 12th, 1889.

During the past five years, meetings have been held practically every month during each season. A gradual change was made however in the practice of combining a meeting with a dinner. It was found that there were a few who did not approve of the plan, while others thought that a dry paper and a dry dinner were not conducive to the longevity either of the members or the INSTITUTE. In addition to his responsibility for the interest of the meetings, the Secretary was expected to vouch for the competence of the caterer, and the skill of the chef, while certain famishing guests would implore him to hurry up that dinner, regardless of its condition. The object sought, had however been attained. A fair audience was always in attendance, and the TRANSACTIONS will bear witness to the fact that the discussions have been well sustained. The plan of meeting over a dinner table was abandoned after less than a year's experience—not because it was a failure—but for the reason that it had proved successful in providing that momentum which has since been maintained. Acquaintances had been formed, and that *esprit du corps* so essential to an organization of this character had gradually been established.

GOOD EFFECTS OF THE PRACTICE.

The object of the writer in directing your attention to this sketch of the experience of those who undertook the task of organizing meetings in New York, is to show that the present standing of the INSTITUTE is largely due to the persistence of the local members in forcing the issue. The necessity of this action was not generally appreciated at that time. As will be seen, the movement was in imminent danger of being side-tracked to make way for the all conquering wire-gauge question, which like a weed driven from a well cultivated garden, may find refuge upon the premises of the next door neighbor. After the American Society of Mechanical Engineers, upon whose domain it has recently encroached, has passed through experience similar to that of the electrical organizations, the wire-gauge family will perhaps be

large enough to organize a society by itself, when the writer trusts that the various members of that prolific race, may follow the historic example of the Kilkenny cats.

At the expiration of the fiscal year May 17th, 1887, the total paying membership of the INSTITUTE was 98, classified as follows:

New York and vicinity.....	55
Other places.....	43
	<hr/> 98

One year later the membership was 322, classified as follows:

New York and vicinity	152
Other places.....	170
	<hr/> 322

The present membership is as follows:

New York and vicinity.....	248
Other places.....	494
	<hr/> 742

This increase was largely due to the holding of more frequent meetings, by which officers and members were stimulated to greater exertions, while the electrical public generally, were taught to appreciate the value of such an organization. It is scarcely necessary to state that in 1886 there was no call for meetings to be held elsewhere. It is, however, proper to add that the necessity of considering the question has been more or less prominent since the year 1888. It will, perhaps, be remembered that at about this time there was a widespread movement for the establishment of electric clubs. It had no doubt been assumed, that the failure to establish permanent local electrical societies was due to the fact that they lacked the incorporation of certain social features, and were therefore avoided by an element which would otherwise contribute to their success. Attempts were made to combine the scientific and practical, with the social features, and the plan had the appearance of being a good one. It was sufficiently attractive to divert the support of electrical men to such local organizations, and the policy of the INSTITUTE has been to carry on its own work without the slightest attempt to intrude upon the field already occupied by local associations. Any movement in this direction, would no doubt, have led to jealousy and antagonism, productive of more harm than good. It is doubtless true that the organizers of local associations, have seen no way by which they could accomplish their

object, excepting upon a strictly independent basis; certainly the INSTITUTE has never offered a plan by which they could assemble under its auspices.

AUTHORITY FOR HOLDING LOCAL MEETINGS.

Instead of the Rules of the INSTITUTE *not* providing for local meetings, it appears to the writer that the opposite is the case. The rule governing meetings has already been quoted. It was supposed in 1886 that some amendment to the Rules was necessary to meet the proposed conditions, but at the annual meeting, May 18th, 1887, it was officially announced from the Chair that no further legislation was necessary. At that meeting the following episode occurred:

MR. MAILLOUX:—I would like to call attention to the fact, that no action has been taken yet to perpetuate the arrangement in vogue last year, for monthly meetings.

THE PRESIDENT:—[Mr. T. C. Martin.] It is within the discretion of the Council.

MR. MAILLOUX:—It was intended to have some amendment to the Constitution at this meeting, was it not?

THE PRESIDENT:—It was found that no action was necessary. [The general meeting then adjourned.]

It would therefore appear that under Rule 6, meetings may be called at the discretion of Council, or by the Secretary upon the petition of fifteen members. The assumption is, that in the opinion of those who suggested this rule, the grouping of fifteen members was of sufficient importance to warrant the holding of a meeting. No restriction exists as to the place of meeting, due, no doubt, to the well known practice of national societies of holding their meetings in various parts of the country.

The history of the movement for holding monthly meetings in New York City, has been given you for the purpose of showing that they were authorized *only upon the manifestation* of an earnest desire on the part of a sufficient number to hold such meetings. It is evident, however, that unless the privileges conferred by the Rules are pointed out, or until some person evinces sufficient interest to inquire what steps are necessary to secure such privileges, the Council is not in a position to act.

This question has already been brought up by the inquiry of Dr. Perrine, at the annual meeting, May 16th, 1893, already referred to, and by Mr. Steinmetz, at the monthly meeting, September 20th, 1893. At an informal meeting of the Chicago

members, at the World's Fair quarters of the Institute, September 2d, 1893, the occasion was availed of to point out what proceedings were necessary, on the part of members, to bring about meetings of the INSTITUTE in Chicago and vicinity. A committee was appointed to canvass the membership and advise the Council, or petition the Secretary, as might seem most expedient as provided by Rule 6.

There has been a disposition to characterize this movement as contemplating the organization of "branches" or "chapters." The reason for this may have been that no other plan seemed feasible, and even this, as may readily be seen, would require a revision of the Rules. In considering this question, the Council has been confronted by various obstacles.

If at the proposed meetings, papers were read and discussed in addition to the ordinary schedule of the year, the publication of this additional matter might incur an expense beyond the present income of the INSTITUTE. Such a plan might result in a sufficient growth of membership to warrant assuming the risk, but this could be demonstrated only by experience. There has not at any time been a sufficient indication of a strong desire to hold meetings in other cities, consequently the Council has not seen any necessity of arranging for their appointment.

PROPOSED PLAN OF ACTION.

Having called attention to the points requiring consideration, the writer will direct your attention to a plan originally suggested by Mr. Martin, Chairman of the Committee on Papers and Meetings, but which has been tentatively discussed, and elaborated, and finally molded into what appears to be a practical form.

The basic principle is the division of the monthly meetings into sections—not because of the discussion of different subjects—but for the purpose of overcoming the geographical difficulty which confronts us. There might be for example, in the case of the 81st meeting, a New York section, a Chicago section, and a Lynn section, which would be called together upon the same date. The paper announced for the meeting is printed and distributed in advance to the members. At those points where the various sections are to meet, and the author is not present, the member selected to present the paper, should be provided with an early proof so that he may be prepared to reply to any questions that may arise. These sectional meetings might be presided over by

regularly elected members of the Council, or a temporary chairman; either course being available. The details of arrangement for such meetings would necessarily be in the hands of a local committee or secretary. Notes of the discussion could be taken by the secretary, and afterwards written out in full by the speakers, or a verbatim report could be made if the necessary expense was provided for. In any case the report of the discussion might be sent to the secretary, and revised by the Editing Committee. In case of duplication of ideas, the points raised could be made more emphatic by inserting in brackets, or as a footnote, words to this effect: "in the discussion of this paper by the Chicago section, Mr. A. raised a similar point."

It appears reasonable to suppose that the division of a meeting into sections at a distance from each other, would awaken renewed interest in the proceedings, due to the thoroughness with which the papers would be discussed, as well as the novelty of the plan. It is also evident that with the aid of the long-distance telephone, each section might be placed in communication with that at which the author was present, and thus secure satisfactory replies to any question that might arise. This is a simple suggestion in the way of meeting objections which have been raised to the absence of the author from meetings where a paper is read by proxy. As a matter of fact, however, the reading of papers by proxy is quite a common practice in all societies, although the presence of the author is desirable for many reasons.

It is well to understand that the popular idea of a successful meeting, is one where an audience is present sufficiently large to fill a room, although the actual proceedings may be participated in by a very small number. The normal audience of INSTITUTE members might be enlarged by the establishment of an informal list of "provisional members" or "auditors," who would be simply invited guests, and who might be permitted to take part in the discussion under certain restrictions. The names of these provisional members would not be placed on the INSTITUTE list, and they would not be entitled to the printed TRANSACTIONS, until they were regularly proposed for membership, and elected by the Council in the usual manner.

In cases where a local organization already exists, its membership might be considered as "provisional members" of the INSTITUTE or "auditors" as already suggested. The latter title an equivalent would be preferable as not implying membership

of any grade. Notices could be mailed to these either by the Secretary of the INSTITUTE, or the local secretary as might be most convenient.

QUESTIONS OF FINANCE AND POLICY.

There remains at least one question to be solved in connection with this plan. No provision has been made for the additional expense arising from the establishment of sectional meetings. It would appear proper that a small fee be required from provisional members, which would have a good effect in assuring them that they were properly entitled to attend the meetings. The amount of this fee would depend upon the local expense incurred. The question of meeting these expenses would necessarily be first in order, and a provisional plan should be devised at the outset. In the case of Chicago, the Armour Institute has offered to the INSTITUTE very desirable quarters for local meetings free of charge. No doubt similar arrangements could be made with other colleges, where advanced students could be placed on the unofficial list and given the benefit of experience in meetings of this character. The faculty of the Massachusetts Institute of Technology has recognized the necessity of such practice, and provides for the holding of meetings where papers are read and discussed in accordance with the practice of technical societies. There would be a decided advantage in giving these students' meetings a more practical character, and by possibly raising the standard of the meetings by actual participation in the proceedings of an established national society.

In the case of papers originating with members within the jurisdiction of any section, the regular procedure would be for papers to be submitted to the Committee, or the Secretary as is now the case, and if accepted, to be printed and circulated in the ordinary manner. The author could then be given the option of reading it at whichever section might best suit his convenience.

The standard of papers read would doubtless be fully equal and perhaps even higher than that already attained. This is a question however, that would be settled more satisfactorily by experience.

There is little doubt that the introduction of the practice of monthly meetings, has been of great benefit to the INSTITUTE, not only in the immediate vicinity of headquarters, but throughout the country. It has also been of great advantage to electrical

practice generally. By increasing the importance of these meetings, in the bringing together of our members in various parts of the country, the INSTITUTE would attain still higher standing and the value of membership appreciated accordingly. The possibility of sectional jealousy will be reduced to the minimum, and any possible supremacy of one section over another will be due simply to the ability and energy of its members, rather than to their mere number.

THE PRACTICE OF OTHER ENGINEERING SOCIETIES.

The questions discussed in this paper have been brought forward in various forms in every national society ever organized in this country. They have been met in an imperfect manner by many of them. The American Society of Civil Engineers holds meetings twice each month in New York City, appointed by the Board of Direction. It also holds an annual convention at any point in the country which may be selected by vote. The American Society of Mechanical Engineers holds its autumn meeting in New York City, and its spring meeting elsewhere. Last year it took place in San Francisco. The American Society of Mining Engineers holds its meetings at various points in the country, three times each year. The American Institute of Architects is organized on the chapter system, holding local meetings and an annual convention of delegates. The writer has examined this system with considerable interest, but does not consider it adapted to the present needs of electrical engineers.

As was pointed out in the discussion of this question at the annual meeting, it had been ignored by the American Society of Civil Engineers until the local societies had in many cases gained such strength that they declined to be amalgamated with the national body.

As one instance of the importance of such societies your attention is directed to the Engineers' Society of Western Pennsylvania, which was incorporated in 1880. Its charter permits the admission of civil, mechanical and mining engineers, geologists, architects, managers and superintendents of railroads, mills and manufactories and other persons engaged in scientific and mechanical pursuits pertaining to engineering, either as active or honorary members. It holds monthly meetings and prints its transactions upon the same plan as the INSTITUTE, issuing temporary monthly parts and a volume made up from them at the end of the year.

Mr. Robert E. Corbett, Chairman

Dear Mr. Corbett:

We are pleased to learn that you have formed a new Power Electronics Chapter in the Chicago Section and therefore we would also like to add our congratulations.

For your information, as you can see from the closure below, I am the Society Chapters Coordinator in the Technical Activities Department. Should you need any assistance, especially in this early period of organization, I will be happy to offer my services in any way that I can. I may be reached at the above address and/or telephone number.

As a starter we have prepared a videotape entitled "Technical Activities - Chapters Coordination: Meetings." If you desire, we shall be happy to loan you a copy upon request.

Thank you and good luck.

Sincerely,

Frank Farinella
Society Chapters Coordinator

*Managing Director
Regional Activities*

21 December 2005

Dr. Derong Liu

Dear Dr. Liu:

Congratulations! On behalf of the IEEE Regional Activities Vice President, Marc T. Apter, and IEEE Technical Activities Vice President, John Vig, it is a pleasure to inform you that the requirements of the RAB Operations Manual have been met, IEEE Chicago Section – Computational Intelligence Society Chapter has been formed. The effective date of this Chapter formation is 09 November 2005.

You have been recorded as the Chapter Chair. When an election has been held, please report the name and member number of the new Chapter Chair to the IEEE using the online Officer Confirmation form at <http://www.ieee.org/scsreports>. Valuable information regarding IEEE Society Chapters can be found at www.ieee.org/chapters. If we can assist you in any way in the planning of the Chapter activities, please let us know.

We extend our best wishes for the successful operation of this Chapter.

Sincerely,

A handwritten signature in cursive script that reads 'Cecelia Jankowski'.

11 September 2006

Mr. Jack Sherman

Dear Mr. Sherman:

Congratulations! On behalf of the IEEE Regional Activities Vice President, Pedro Ray, and IEEE Technical Activities Vice President, Celia Desmond, it is a pleasure to inform you that the requirements of the RAB Operations Manual have been met, and the request to add Geoscience and Remote Sensing, Oceanic Engineering, and Aerospace and Electronic Systems Societies to the IEEE Chicago Section – Nuclear and Plasma Sciences, and Magnetics Joint Societies Chapter has been approved. The effective date of this Chapter change is 20 July 2006.

When an election has been held, please report the names and member numbers of the new Chapter Chairs to the IEEE using the online Officer Confirmation form at <http://www.ieee.org/scsreports>. Valuable information regarding IEEE Society Chapters can be found at www.ieee.org/chapters. If we can assist you in any way in the planning of the Chapter activities, please let us know.

We extend our best wishes for the successful operation of this Chapter.

Sincerely,

Subject Notification of changes to Chicago Section Chapters

At recent meetings, the Chicago Section Executive Committee approved:

1. The separation of its joint EM/PC chapter to form two chapters, EM and PC.

This action has the approval of Robert Burke Membno 00280768 Chair, EM Chapter, and Jack Sherman, Membno 00358846, Acting Chair, PC Chapter

2. The joining of GRS/OE/AES to our existing joint chapter NPS/MAG thereby forming a joint chapter GRS/OE/AES/NPS/MAG.

This action has the approval of the NPS/MAG chapter chair, Jack Sherman, 00358846

We appreciate the forwarding of the relevant guidelines and procedures to us from RAB by Lauren Leaston, S-C Support coordinator/administrator.

These actions will enable us to internalize SC05's credo to assure substantive vigor is available to our members by providing them with access to meetings of technologies that have been lacking within our section.

Thank You

John A Zulaski, [REDACTED]

Mr. Robert G. Burke

Dear Dr. Burke:

Congratulations! On behalf of the IEEE Regional Activities Vice President, Pedro Ray, and IEEE Technical Activities Vice President, Celia Desmond, it is a pleasure to inform you that the requirements of the RAB Operations Manual have been met, and IEEE Chicago Section – Engineering Management/Professional Communications Societies Joint Chapter has been split. The effective date of the IEEE Chicago Section – Engineering Management Society Chapter and the IEEE Chicago Section – Professional Communications Society Chapter formation is 1 July 2006.

At this time, we are recording you as the Chair of both Chapters. When an election has been held, please report the name and member number of the new Chapter Chair(s) to the IEEE using the online Officer Confirmation form at <http://www.ieee.org/scsreports>. Valuable information regarding IEEE Society Chapters can be found at www.ieee.org/chapters. If we can assist you in any way in the planning of the Chapter activities, please let us know.

We extend our best wishes for the successful operation of this Chapter.

Sincerely,

Subject Notification of changes to Chicago Section Chapters

At recent meetings, the Chicago Section Executive Committee approved:

1. The separation of its joint EM/PC chapter to form two chapters, EM and PC.

This action has the approval of Robert Burke Membno 00280768 Chair, EM Chapter, and Jack Sherman, Membno 00358846, Acting Chair, PC Chapter.

2. The joining of GRS/OE/AES to our existing joint chapter NPS/MAG thereby forming a joint chapter GRS/OE/AES/NPS/MAG.

This action has the approval of the NPS/MAG chapter chair, Jack Sherman, 00358846

We appreciate the forwarding of the relevant guidelines and procedures to us from RAB by Lauren Leaston, S-C Support coordinator/administrator.

These actions will enable us to internalize SC05's credo to assure substantive vigor is available to our members by providing them with access to meetings of technologies that have been lacking within our section.

Thank You

John A Zulaski, LS 03850047

2006 Chair, IEEE Chicago Section

Professor John Hull

Dear Professor Hull:

Congratulations! On behalf of the IEEE Regional Activities Vice President, Pedro Ray, and IEEE Technical Activities Vice President, Celia Desmond, it is a pleasure to inform you that the requirements of the RAB Operations Manual have been met, and IEEE Chicago Section – Education Society Chapter has been formed. The effective date of this Chapter formation is 16 February 2006.

At this time, we are recording you as the Chapter Chair. When an election has been held, please report the name and member number of the new Chapter Chair to the IEEE using the online Officer Confirmation form at <http://www.ieee.org/scsreports>. Valuable information regarding IEEE Society Chapters can be found at www.ieee.org/chapters. If we can assist you in any way in the planning of the Chapter activities, please let us know.

We extend our best wishes for the successful operation of this Chapter.

Bob,

Thanks to you and John for taking the initiative to hep start a local chapter in the Chicago area. **I support the formation of an IEEE Education Society Chapter in the IEEE-Chicago Section.** Given the number of institutions in the Chicago area teaching electronics at various levels I think we should be able to attract and maintain active involvement in local activities. Please let me know if we reach critical mass.

Rob and John,

**" I support the formation of an
IEEE Education Society Chapter in the
IEEE-Chicago Section."**

There are presently 29 active members of the Society in the Chicago
Section so to get the 12 necessary for the petition should not be an
issue. If you can get the petition supported by Region and RAB, with
the EDU Society support already in place we should be able to have at
least two meetings for 2005. I will move to obtain Section budget
availability for 2006.

Cheers,
Jack

Mr. Jack Sherman

Dear Mr. Sherman:

Congratulations! On behalf of the IEEE Regional Activities Vice President, Marc T. Apter, and IEEE Technical Activities Vice President, John Vig, it is a pleasure to inform you that the requirements of the RAB Operations Manual have been met, IEEE Chicago Section – Vehicular Technology Society Chapter has been formed. The effective date of this Chapter formation is 05 October 2005.

At this time, we are recording you as the Chapter Chair. When an election has been held, please report the name and member number of the new Chapter Chair to the IEEE using the online Officer Confirmation form at <http://www.ieee.org/scsreports>. Valuable information regarding IEEE Society Chapters can be found at www.ieee.org/chapters. If we can assist you in any way in the planning of the Chapter activities, please let us know.

We extend our best wishes for the successful operation of this Chapter.

Sincerely,

Cecelia Jankowski

*Managing Director
Regional Activities*

30 June 2005

Dr. Arye Nehorai

Mr. Jack Sherman

Dear Dr. Nehorai & Mr. Sherman:

Congratulations! On behalf of the IEEE Regional Activities Vice President, Marc T. Apter, and IEEE Technical Activities Vice President, John Vig, it is a pleasure to inform you that the requirements of the RAB Operations Manual have been met, and the change in status of the IEEE Chicago Section – Signal Processing/Consumer Electronics Joint Societies Chapter has been approved.

The Joint Chapter has split into two units. The separate Chapters will now be the IEEE Chicago Section – Signal Processing Society Chapter, chaired by Dr. Arye Nehorai and the IEEE Chicago Section – Consumer Electronics Society Chapter, chaired by Mr. Jack Sherman.

The effective date of this Chapter change on is 03 June 2005.

When an election has been held, please report the names and member numbers of the new Chapter Chairs to the IEEE using the online Officer Confirmation form at <http://www.ieee.org/scsreports>. Valuable information regarding IEEE Society Chapters can be found at www.ieee.org/chapters. If we can assist you in any way in the planning of the Chapter activities, please let us know.

We extend our best wishes for the successful operation of this Chapter.

Sincerely,

Cecelia Jankowski
Managing Director
Regional Activities

Subject: IEEE Chicago Section, Signal Processing/Consumer Electronics Joint Societies Chapter CHANGE

Greetings,

We have received a request from Section Secretary, Ronald David Kollman (ron_kollman@ieee.org) to change the status of the IEEE Chicago Section - Signal Processing/Consumer Electronics Joint Societies Chapter. The request is to split the Joint Chapter into two separate Chapters.

The new chapters will be:

IEEE Chicago Section - Signal Processing Society Chapter

Chaired by Arye Nehorai [REDACTED]

IEEE Chicago Section - Consumer Electronics Society Chapter

Chaired by Jack Sherman [REDACTED]

If you have any objections to this Chapter change, please contact me immediately. If no objections are received by 03 June 2005, I will proceed with this Chapter change.

Warmest regards,

Lauren

Norman E. Phoenix

Dear Mr. Phoenix:

On behalf of the Executive Director, Dan Senese, it is a pleasure to inform you that the requirements of the IEEE Bylaws have been met, and the Electron Devices Society Chapter of the Chicago Section has changed status to include the Circuits and Systems and Solid State Circuits Societies. The effective date of this Chapter change is 3 December 1997.

At this time we are continuing to record you as the Chapter Chair. When an election has been held, please use the enclosed Officer Confirmation form to report the officers to IEEE. If we can assist you in any way in the planning of the Chapter activities please let us know.

We extend our best wishes for the successful operation of this Chapter.

Sincerely,

Cecelia Jankowski

RECEIVED
NOV 24 1997
REGIONAL ACTIVITIES

Dear Bill:

The Chicago Section's Electron Devices Chapter would like to include members of the Circuits and Systems Society and members of the newly formed Solid State Circuits Society thus creating a joint chapter between the three societies. The new chapter would combine these closely related societies of the Circuits and Devices Division, allowing the existing chapter to both expand its subject matter and service a larger portion of the Chicago Section's membership.

Please arrange for our current ED Chapter to be reformed into a joint Chicago Section chapter of the Electron Devices, Circuits and Systems, and Solid State Circuits Societies. If any additional information or support from our local members is needed, you may contact me at (847)523-1078.

Best Regards,

Dear Mr. Trui:

Congratulations! On behalf of IEEE's General Manager, Mr. Eric Herz, it is a pleasure to inform you that the requirements of the IEEE Bylaws have been met, and the change in status joining the Acoustics, Speech & Signal Processing Chapter and the Consumer Electronics Chapter in the Chicago Section has been approved. The effective date of the ASSP-01/CE-08 Joint Chapter formation is December 1, 1989.

At this time we are recording Robert J. Tervin as the new Joint Chapter Chairman. If we can assist you in any way in the planning of the Chapter activities please let us know.

We extend our best wishes for the successful operation of this new Chapter.

CHAPTER ACTIVITIES - 1974

Section CHICAGO

Chapter Communications COM-19

Meetings Reported to IEEE for 1974: 1

Chapter members, above Student grade,
as of 12/31/74: 260

Miss Sirjane:

We wish to report on the status of the above Chapter as follows:

- () Report of additional 1974 meetings attached.
- () No additional meetings were held by this Chapter.
- (✓) Plans are underway to reactivate this Chapter. I will advise you further in this matter on 7-1-76
- () No plans are underway to reactivate this Chapter and the Section Executive Committee recommends that it be dissolved because:

Other Comments:

*Only one meeting was held again in 1975.
Another meeting was planned, but a snow storm
caused cancellation. (4-7-75)

September 15, 1980

Mr. J. Clifford Torbert, Jr.

Dear Mr. Torbert:

We are pleased to advise that all concerned approved the establishment of the Electron Devices Chapter in the Chicago Section on September 15, 1980.

At this time we are recording you as the Interim Chairman. When an election has been held, please use the enclosed Chapter Officers form (L7) to report the officers to IEEE. If we can assist in any way in the planning of the Chapter activities, please let us know.

We extend our best wishes for the successful operation of this new Chapter.

Sincerely,

Patricia D. Lech

Dr. Thomas Jurgens

Dear Dr. Jurgens:

Congratulations! On behalf of the IEEE Executive Director, T. W. Hissey, Jr., it is a pleasure to inform you that the requirements of the IEEE Bylaws have been met, and the Nuclear and Plasma Sciences/Magnetics Society Joint Chapter of the Chicago Section has been formed. The effective date of this Chapter formation is November 1, 1995.

At this time we are recording you as the Interim Chapter Chairman. When an election has been held, please use the enclosed Officer Confirmation form to report the officers to IEEE. If we can assist you in any way in the planning of the Chapter activities please let us know.

We extend our best wishes for the successful operation of this Chapter.

Sincerely,

Cecelia Jankowski
