EDITOR'S PROFILE of this issue

from a historical perspective ... with Paul Wesling, SF Bay Area Council GRID editor (2004-2014)

February, 1964:

- Cover: A 10-foot section is prepared for installation in Stanford's MARK III electron linear accelerator, made up of 31 such sections. Contrast this to the 1,000 similar sections that will be installed in the 2-mile-long electron linear accelerator (SLAC) now being constructed behind the campus.
- Page 3: Barnie Oliver, head of research at HP, is appointed a vice president of the newly formed IEEE.
- Page 4: It's time again for the annual Engineers Week. It is traditionally held during the third week of February in honor of George Washington, one of the great engineers.
- Page 8: WESCON has grown so large that it is now split between venues most of it at the LA Sports Arena, but some at the Hollywood Park Racetrack. The exhibits are split into nine categories and placed/grouped according to a survey run the previous year at WESCON in SF.

cover

New gun barrel for shooting electrons at nuclear targets is being installed on Stanford University's billionvolt Mark III linear accelerator. The 31 ten-foot sections of copper pipe for the Mark III contrast with 1,000 sections that will be needed for the twomile accelerator under construction.

new... solid state SRA SERVO PHASE SHIFTER

When the new Model SRA is combined with its companion unit, the Model VLA Receiver Phase Comparator, it becomes possible to automatically measure and standardize frequencies to an accuracy of one part in ten billion. Measurements may be permanently displayed on a strip-chart recorder.

Even inexpensive local oscillators will give extreme accuracy as the Model SRA adds phase correction to the oscillator output to phase lock the signal with a multiple of the received standard frequency.

Only 3½" high, the Model SRA is completely modular in construction. Meets environmental requirements of MIL-E-400B.

SPECIFICATIONS

INPUTS	(1) Phase detector voltage from Model VLA
	(2) 2 x RF signal voltage from Model VLA
	(3) 2 x RF synthesized volt- age from Model VLA
PHASE OUTPUT	0.5 milliampere to \pm 0.5
FOR RECORDER	milliampere output into
	1000 ohms corresponding to
	100 microsecond phase shift.
DIGITAL READOUT	Calibrated in microseconds
SIGNAL LEVEL	Output of 3 v max, into 1000 ohms provided for recorder
POWER	19 v d-c from VLA
SIZE	31/2" H x 19" W x 171/2" D Weight 29 lbs.

SRA PRICE \$1990.00

BROADBAND PERFORMANCE

Eric D. Daniel, director of research, Memorex Corporation, will discuss problems in obtaining broadband performance in magnetic recording at the February 12 meeting of the PTG chapter on Audio.

A brief description of ac-biased recording will be given in terms of anhysteresis. Several different models will be used to illustrate particular aspects of the recording process. These will demonstrate that there is a conflict between the efficient recording of short and long wavelengths. To obtain maximum short-wavelength performance, short-record gaps and low values of ac-bias are required and the smoothness of the tape, both physically and magnetically, must approach that of an optical surface. The demands made on the tape will be illustrated by showing electron-micrographs of tape surfaces and sections, and by calculations based on current achievements in broadband recording.

SUBMERGED ANTENNAS

Rumsey

Prof. Victor Rumsey of the University of California at Berkeley will discuss submerged antennas at the February 12 meeting of the PTG chapter on Antennas and Propagation. The group will meet in Room 277 of Cory Hall.

A bus for Berkeley will depart the Stanford Shopping Center at 6 and Dalmo Victor Co. at 6:15. Reservations for the dinner and bus transportation must be made in advance with A. S. Dunbar, LSMC, RE 9-4321, Ext. 26114, or W. J. Welch, TH 5-6000, Ext. 3539, before Feb. 10.

publication notes

NEW WORK ON SIDEBAND

E. W. Pappenfus, vice presidentengineering, Granger Associates, is author with Warren B. Bruene and Edgar Schoenike of Collins Radio Co. of a new technical reference on "Single Sideband Principles and Circuits," published by McGraw-Hill Book Co., New York. The book covers the theory and engineering practices of single sideband in the propagation and reception of radio signals.

RELIABILITY/MAINTAINABILITY

MTBF

The PTC chapter on Reliability will meet jointly with the Maintainability Society on February 17 for a panel discussion on reliability-maintainability interface. Moderator will be Owen Holbrook, chairman of PTGR. The maintainability side will be represented by John Decker of Sylvania EDL and Joe Hockman of LSMC. The reliability viewpoint will be presented by Alan Albert of Philco WDL and William Blakely of Sylvania SES West.

Some of the aspects to be discussed are: the definition of availability =

ieee elections

FOUR FROM REGION 6 NAMED

Four officers from the Region 6 area have been elected by the membership or appointed by the IEEE Assembly, according to a January announcement.

Walter E. Peterson, president of Automation Development Corp., Los Angeles, was elected IEEE vice president. He is also a member of the board of directors and a former chairman of the Los Angeles Section.

B. M. Oliver, vice president, research and development, Hewlett-Packard Co., Palo Alto, was appointed vice president of IEEE. He is a former

WINTER POWER MEETING

The first Winter Power Meeting of IEEE, sponsored by the Power Di-vision, will be held February 2-7 in the Statler Hilton Hotel, New York City, and will feature a 48-session technical program on insulated conductors, power generation, power system communications, system engineering, protective devices, relays, rotating machinery, and transmission.

J. H. Kinghorn, of the American Electric Power Service Corp., N.Y., is the general chairman, assisted by E. J. Merrell, Phelps Dodge Corp.

A special awards lunch will be held Monday, February 3, at which the Habirshaw Medal will be presented to L. M. Robertson of the Public Service chairman of the San Francisco Section and has served IEEE in numerous capacities.

Eugene C. Starr, consultant, Bonneville Power Administration, Portland, Oregon, was elected director-at-large for a one-year term.

Bruce S. Angwin, manager, western region, receiving tube department, General Electric Co., Los Angeles, was elected Region 6 director for a one-year term. He is a former chairman of the Los Angeles Section and has been active in regional affairs for many years.

Company of Colorado, Denver. An open forum to discuss plans for inauguration of the Professional Technical Group on Power will be held Monday afternoon following the luncheon and the general session. The

initial administrative committee will present the program for general membership participation through professional technical group format. Organization, publication, and activities as planned will be open for review and discussion before submission to the IEEE executive committee.

The San Francisco Section will be represented by a group led by J. E. Barkle, interim chairman of the PTGP chapter.

professional notes ENGINEERS' WEEK

Dr. Richard M. Fulrath of Berkeley, professor of ceramic engineering at the University of California, has been appointed general chairman for the Bay Area's annual Engineers' Week.

Engineers' Week is observed nationally during the week of the birthday of George Washington, one of the great engineers.

The week is proclaimed nationally by the President and sponsored by the National Society of Professional Engineers in order to bring to the public's attention the important, if little known, work engineers do.

In the Bay Area, the Engineers' Week executive committee is devoted to finding outstanding high school senior science and mathematics students and honoring them with scholarships and awards. The winners in the ten Bay Area zones will be announced early in February.

Zone winners will be guests at the annual Engineers' Week banquet at the Sheraton-Palace Hotel during the week of February 17-22. At the banquet the winners of the four scholarships will be announced. There will be a top scholarship of \$1,000 and three runners-up of about \$800, depending on donations of local industry

FOR SOLID STATE DC POWER

FASTEST DELIVERY From stock, or shipped 10 days ARO.

WIDEST CHOICE Catalog lists over 3000 models.

HIGHEST QUALITY Modules are compact, rugged, fully encapsulated, available to meet MIL performance specifications. Proven circuitry for top electrical and thermal characteristics. Two year warranty.

AC-DC REGULATED POWER MODULES 0.5 to 340 VDC. to 600 watts, temperature ratings 65 C, 80 C, 100 C, and 115 C, accuracy ±0.5% or ±0.05%.

AC-DC UNREGULATED POWER MODULES Low in cost, 0.5 to 1000 VDC, to 1000 watts.

DC-DC REGULATED CONVERTERS Inputs 12, 24, 28 VDC, outputs to 2000 VDC at 15, 30, 60 watts. Multiple outputs available.

> All modules available in rack mounted versions.

ptgmil news FIFTH WINTER CONVENTION

Dr. Albert C. Hall, the Defense Department's new deputy director for space research, and Maj. Gen. F. H. Britton, Army Materiel Command director of research and development, will be headline speakers for the Fifth Winter Convention on Military Electronics in Los Angeles.

Dr. Hall's address on "The Objectives of the Military Space Program" is set for the convention's annual luncheon February 5, opening the three-day meeting at the Ambas-sador Hotel. The address will be the first official discussion for western industry on the U.S. military/space objectives. Dr. Hall was appointed DDR&E for Space last August.

General Britton will address the traditional banquet meeting February 6, on the topic, "Know the Mission."

Both speakers and the keynote panel discussion on "Weapons System Selection-1964," headed by the Defense Department's Dr. Eugene Fubini, are expected to draw a record attendance by representatives of government and industrial science.

and engineering organizations, including the section, whose contributions support the scholarships.

Banquet tickets will be available from the section office.

Dr. Fulrath announced the following appointments to his executive committee: co-chairman, James Vivrette, County Surveyor and Road Commissioner, Alameda County; assistant to chairman, William Enkeboll, Dames and Moore Engineering, San Francisco; secretary, William D. Harris, University of California Extension, Berkeley; treasurer, Dr. Donald Olander, University of California, Berkeley; finance chairman, J. L. Cunningham, Standard Oil Company, San Francisco; scholarship awards chairman, Jack T. Elmer, Kaiser Aluminum and Chemical Corp., Oakland; displays chairman, Edward Boyer, Atomic Energy Commission, Berkeley; contacts and speakers chairman, Jim See, San Francisco Bay Toll Crossings, San Francisco; public relations chairman, William J. Eisenlord, Shell Development Company, Emeryville; banquet chairman, Herman Spaeth, Pacific Fire Rating Bureau, San Francisco; co-chairman-finance, Robert Cromelin, Hayward City Hall, Hayward; cochairman-scholarships and awards, C. C. Williams, Shell Development Company, Emeryville; co-chairmancontacts and speakers, Cliff Tabor, Bechtel Corp., San Francisco; and cochairman-banquet, Donald D. Bentley, Bentley Engineering.

RHG builds the widest selection of special purpose receivers. RHG will custom build a system to your specifications. Such features as wideband FM with basebands to 15 Mc, gain and phase matched IF channels, and IF laboratory receivers at 30, 60, 70, 105 and 200 Mc are standard. Available in solid state or tube versions. Write or call for full details.

Ampex is now in the printed circuit business. And we're eager to please.

In fact we're just plain eager. Like a lot of companies that rely heavily on high-quality printed circuits, we learned a long time ago that the only way to insure reliable quality is by tedious, time-

consuming Inspection. So we inspect at every critical stage of manufacture—photography, etching, plating, drilling, etc. And then we do It again. And then again, until we're satisfied. Delivery? On time, and as specified.

And we're itching to show you what we can do for you. Ampex printed circuits are available either silk-screened or litho offset, one-side or plate-through two-side. Quantities range from 1 to 5

> on up into the thousands. Next time you want to see just how much service you get from a manufacturer of printed circuits call your Ampex representative, Components Operations, 2220 Bay Rd., Redwood City, Calif. EM 7-3861.

Specialists serving the Engineer and Scientist

Our client companies are both local and nationwide

For the engineer or scientist wishing to avail himself of an effective placement service, we invite your inquiries-in confidence, of course.

STANDARDS ENGINEER

GRANGER ASSOCIATES, a growing and recog-nized leader in the RF communications field, has an immediate position for a standards engineer who will develop, implement and monitor an engineering standards program. Candidates for this position should be able to establish and maintain a broad program of specification control and engineering material standards, and be able to identify preferred materials and components associated with RF communications.

Requirements for this position are a degree in engineering, several years standards engineer-ing experience, and complete familiarity with materials and components.

Please contact Jerry Franks, Personnel Manager, if you are interested.

wescon news

NEW EXHIBIT FORMAT

WESCON has revealed its 1964 plans, including sharp departures in exhibit format for the show next summer in Los Angeles.

For the first time, 1,200-plus product and system exhibits will be divided into categories of interest-nine of them in all-positioned in the show according to related interest:

- At Los Angeles Memorial Sports Arena: measurement, production equipment, communications and detection, air and space systems, audio and closed-circuit TV, and publishers.
- At Hollywood Park Racetrack: components, automatic control, and data processing and conversion.

WESCON employed advanced techniques of audience research to arrive at the decision for categorization of the show and for placement of categories. A research project, conducted on WESCON's behalf by its public relations representatives, West Associates, surveyed the entire WESCON attendance of 40,000 persons in San Francisco in 1963, and utilized computer analysis of the answers to a carefully designed series of questions about viewer habits.

The result is expected to benefit both exhibitors and visitors significantly. Exhibitors will find their booth visitors to be specifically interested in their particular product field, and small and large exhibitors alike will benefit from the "complete review" of all new achievements of the year presented in one place.

"The WESCON board feels it now knows more about who comes to the show, and why, and how they act, than anyone has ever known before about a technical convention audience," Don Larson, manager, said.

PERFORMANCE PROVEN PULSE CAPACITORS

This capacitor is manufactured by the hundreds; and is fully tested to meet modern high-power, line-type modulator requirements.

SPECIFICATIONS: (Model #2P444E104B5) Capacitance: 0.012 µf ± 5% / section (two sections) Voltage: +44 kv Charging PRF: 360 pps Mar. CALL OR WRITE FOR COMPLETE SPECIFICATIONS AND QUOTATIONS ON THIS AND OTHER CAPACITORS ENGINEERED. MANUFACTURED AND TESTED TO YOUR NEEDS

GERTSCH VARIABLE PHASE STANDARD

--permits shifting of phase between 2 self-generated voltages to any desired angle, with accuracy better than $\pm .05^{\circ}$

Precise generation of voltage vectors. The Gertsch VPS-1 generates 2 signals differing in phase by any angle from 0° to 360° , as determined by front-panel controls. The reference signal has a fixed amplitude of 50V rms. The vector output, which may be displaced in phase, has a maximum amplitude of 50V rms, and can be attenuated in steps of 50 mv within a range of 0-50V rms.

Operation at any 3 frequencies within a range of 150-3000 cps is provided by a front panel selector switch. Fine adjust control permits varying the frequencies $\pm 5\%$ max.

Completely self-contained-unit requires no accessories for operation. Case or rack mounted. Send for literature VPS-1.

CONTINUOUS COVERAGE

From dc through microwave, your Neely Field Engineer is the man to call for your instrumentation and system requirements. He represents the quality equipment manufactured by the Hewlett-Packard family of companies. He has the right answer for your instrumentation needs, and further, he is a seasoned engineer who is a true

specialist in the application of test instruments and related equipment. Your Neely Field Engineer is backed up by a complete office staff, including extensive order processing and followup facilities. An added value is Neely's local service centers assuring you of continuing satisfaction with your instrument purchases.
