

EDITOR'S PROFILE of this issue

from a historical perspective ...

with Paul Wesling, SF Bay Area Council GRID editor (2004-2014)

May, 1964:

Cover: PG&E hosts a tour of its new indoor substation at Larkin and Eddy Streets, SF, which transforms 3-phase 115kV down to 12 kV for further distribution. It has a capacity of 110 MVA, and will eventually be expanded to 330 MVA. Issues of design, corona suppression, lightning protection, switching surges and more were then discussed at the technical meeting. More on page 4.

Page 3: Jean Helmke appears for the first time in the GRID, as editorial assistant. Many of us grew to know and interact with Jean over the many years she served as the Section's (then Council's) office manager in Palo Alto, eventually turning duties over to her daughter-in-law Gerry Helmke. I can recall many trips to 701 Welch Road to fold flyers for handout or mailing during the years when I was putting on multi-week short courses for my CHMT (now EPS) chapter; for an overview of this series and how it was developed, see the article in the December 1980 issue of the GRID.

Page 4: The tour of the new GM plant in Fremont was so successful (and over-booked) that it is being repeated.

Page 8: The Santa Clara Valley Subsection will have their year-end dinner at the Paul Masson Vineyards ("No wine before its time") in Saratoga, overlooking the Valley. Gail and I attended quite a number of these dinners, where we sampled the wines and watched the lights come on across Sunnyvale and San Jose below. Now the vineyard's amphitheater is the venue for evening musical performances by famous touring groups and stars.

**new
compact
Tektronix
oscilloscope**

easily adapted to particular needs

Here's a high-performance oscilloscope featuring operational simplicity and versatility through a new series of plug-in units. Presently, you can select from 10 amplifier units and 4 time-base units.

Knowing your application area, you select those units that fit your needs. Some of the general-purpose plug-in unit combinations available include those for low-level applications, differential applications, multi-trace applications, wide-band applications, sweep-delay applications, among other presentations. A special-purpose plug-in combination equips the oscilloscope for sampling applications, in which the instrument becomes a low-drift sampling system as easy to operate as a conventional oscilloscope, but with sensitivity and bandwidth possible only through sampling.

With any combination of plug-in units in the oscilloscope—including the same type amplifier units in both channels for X-Y displays—this new value package provides you with "no-parallax" displays and sharp trace photography.

For more information on either model of this new Oscilloscope and any combination of Plug-in Units, please call your Tektronix Field Engineer.

The 2A61/2B67 Plug-In Unit combination—illustrated with Type 561A—equips the oscilloscope for low-level differential applications.

features

NEW CRT . . . with an internal graticule and controllable edge lighting . . . regulated power supplies . . . regulated dc heater supply . . . Z-axis input . . . 3.5-kv accelerating potential . . . amplitude calibrator . . . and operation from 105v to 125v or 210v to 250v. (The Type 561A operates from 50-400 cps and the Type RM561A operates from 50-60 cps.)

Type 561A (shown in low level application) . . . \$470

Type RM561A (shown in sweep delay application) 525

Oscilloscope prices without plug-in units.

Plug-In Units:
Prices as low as \$105 for vertical amplifier and \$175 for time-base generator.

U.S. Sales Prices, f.o.b. Beaverton, Oregon

The 3A1/3B3 Plug-In Unit combination—illustrated with the rack-mount model, Type RM561A—equips the oscilloscope for high-sensitivity, wide-band, dual-trace operation and sweep-delay applications.

The rack-mount model occupies only 7 inches of standard rack height.

Put one to
work for you

Two new amplifiers from Hewlett-Packard Whether you're interested in amplifying pulses or other signals from audio to vhf, one of these new amplifiers from Hewlett-Packard will suit your purpose. The 461A is a general purpose amplifier with an essentially flat frequency response from 1 kc to 150 mc; the 462A is a pulse amplifier with less than 4 nanosecond rise and fall times. Both amplifiers have 20 and 40 db gain, are completely solid state and have exceptional stability. Check the specs; then call your nearest hp field sales office for a demonstration.

Specifications

461A

Frequency Range:
1 kc to 150 mc

Frequency Response:
± 1 db from 500 kc reference

Gain at 500 kc:
20 or 40 db ± 0.5 db selected by
front panel switch

Input Impedance:

Nominal 50 ohms

Output:

½ v rms into 50 ohm resistive load

Noise:

Less than 40 µv referred to input

Distortion:

Less than 5% at maximum output
and rated load

Price:

\$325

Data subject to change without notice.
Prices f.o.b. factory.

461A Frequency response curve: markers at
50, 100, 150 and 200 mc; 40 db gain.

462A a) Input pulse (5 mv p-p); b) Output pulse (500
mv p-p) 40 db gain; sweep speed 5 ns/cm

462A

Pulse Response:

Rise and fall times for both leading
and trailing edges, less than 4 ns;
overshoot less than 5%

Pulse Overload Recovery:

Less than 1 µsec for 10 times
overload

Pulse Duration:

30 µsec for 10% droop

Noise:

Less than 40 µv referred to input

Input Impedance:

Nominal 50 ohms

Gain:

20 or 40 db selected by front
panel switch

Output:

1 v p-p into 50 ohm resistive load

Price:

\$325

GENERAL

Size:

An extra measure of quality

Destination: The Eighth Continent. Of all man's forces working for the betterment of his kind, none offers more promise than technology. For wherever technology has been allowed to flourish under freedom, there have emerged higher living standards, better educational opportunities, and increased dignity for the individual. Now, technology is taking us to the moon—and beyond. Yet there is heard in the land a rising voice which asks, "Why go out there when there-is-still-so-much-to-do-here-on-earth?" The thoughtful scientist and engineer might well answer: "Show me where earth ends and outthere begins."

*meeting ahead***ANNUAL MEETING**

Bay Area IEEE members turn "first weekers" June 3 when they hold the 1964 annual section meeting at the San Francisco Hilton.

The annual meeting's theme will be sounded by E. Finley Carter, president emeritus of Stanford Research Institute, as he enters the controversial debate which is pitting esthetics against "inexorable progress" in the growing West.

Finley Carter

Carter's "Looking Beyond the Expedient to the Esthetic" will hammer at the "ticky-tacky" trend so noticeable in the California countryside today. He will concentrate, of course, on the sector of the controversy of main concern to electrical engineers. Yet the locale of the annual meeting seems appropriate, since the new hotel's appearance has been discussed hotly by advocates of an increased esthetic awareness.

More to the point for EE's is an example in the public limelight today—the Stanford Linear Accelerator power line. Finley Carter notes that this line, whatever the merits of the pro and con arguments, has served to focus attention on the growing public concern with unsightly transmission, distribution, and communication circuit construction. "The depth of the emotional wrangle being stirred up is serving notice of the intensity of public concern—concern that California not sell its birthright for a mess of progress," says Carter.

On the other hand, Carter believes that over-zealous emotion can be a

(Continued on page 10)

cover

Subject of an inspection trip by the PTC chapter on Power on May 14, PG&E's completely indoor substation at Larkin and Eddy Sts., San Francisco, transforms from 115 to 12 kv. Its initial rated capacity is 110 mva, and the ultimate design capacity will be 330 mva. Three-phase transformers, 12-kv metalclad switchgear of high interrupting capacity, and current-limiting reactors as well as the modern control room are features.

POWER GROUP PLANS

Plans for May and June meetings of the PTG chapter on Power have been announced by Jack Barkle, chairman.

On May 14 an inspection trip of the recently completed PG&E Larkin substation, Larkin and Eddy Streets, San Francisco (shown on the cover), will begin at 7:30 p.m.

On June 9 EHV in the West will be the subject of a symposium and roundtable discussion following the social hour and dinner at the Engineers Club. Taking part will be E. G. Lambert, supervising electrical engineer, department of electric generation and transmission engineering, PG&E; E. W. Morris, Pacific Coast zone electric utility engineer, Westinghouse Electric Corp.; and J. B. Tice, manager application engineering, western region, electric utility sales division, General Electric Co.

The speakers will discuss the present status of design philosophy regarding corona, radio influence, switching surges, lightning, and other subjects related to EHV, including recent studies of the effect of contamination on insulation levels. Practical designs of EHV transmission lines, including series and shunt compensation and transient and steady-rate stability, will be covered.

meeting ahead

SLAC STATUS REPORT

Douglas William Dupen, technical information officer, Stanford Linear Accelerator, will give the Santa Clara Valley Subsection a progress report on the mammoth project at the May 20 meeting in Room 320, Geology Corner, Stanford University.

Mr. Dupen is a member of IEEE, the Society of Technical Writers and Publishers, and the AEC technical information panel. He holds an A.B. in physics, and A.A. and A.B. degrees in speech and English.

meeting ahead

REPEAT OF GM TOUR

To accommodate many IEEE members who could not attend the March 25 tour of the General Motors plant because of space limitations, the Technical Group, Industrial, has arranged for the tour to be repeated on May 21 in cooperation with the Electrical Maintenance Engineers' Assn. Reservations must be made by calling JU 6-4074, and will be limited to 150. Meeting in the main administration building at 6 p.m., the group will dine in the cafeteria and the tour will follow.

MEETING CALENDAR**SAN FRANCISCO SECTION**

6:00 P.M. • Wednesday, June 3

Looking beyond the expedient to the esthetic

Principal Speaker: E. Finley Carter, senior management counselor, and president emeritus, Stanford Research Institute

Annual meeting honoring 1964 Fellows; installation of 1964-65 Section Officers; adoption of Section Bylaws

Social Hour: 6:00 P.M. Dinner: 7:00 P.M.

Place: Ballroom No. 4, San Francisco Hilton, Mason & O'Farrell, San Francisco

Reservations: Order tickets from Section Office, 321-1332. \$6.50, inc. tax & tip

Tables for 10 may be reserved for Subsections, PTG's, Committees, and Companies

EAST BAY SUBSECTION

8:00 P.M. • Tuesday, May 19

SWITCHING SYSTEMS

Dr. C. Y. Lee of Bell Telephone Laboratories, Holmdel, N.J., will address the PTG chapters on Communication Systems and Engineering Writing and Speech at their joint meeting on May 26. He will discuss systems aspects of electronic switching systems under development at the laboratories. In order to meet field conditions, these systems are designed to satisfy broad requirements in economy, reliability, and maintainability.

A graduate of Cornell University and University of Washington, Dr. Lee has been with Bell since 1952, working on the design of switching networks, on logical design of switching systems, on coding theory, and on computer programming and design. He is head of the programming research department at Bell and is spending two semesters at University of California as a Mackay lecturer.

meeting ahead

NEW H-P VOLTMETER

Gregory Justice of Hewlett-Packard's advanced R&D laboratory will address the PTG chapter on Instrumentation and Measurement at its May 27 meeting. Discussing the new HP 3400A RMS-responding voltmeter, he will give an introductory history of ac measurement, with emphasis on methods of rms measurement.

A particular solution to the problem thus posed takes the form of the new meter; the over-all steps taken to achieve the desired ends will be described with reference to a block diagram. The means of fulfilling the requirements of the blocks (i.e., circuit design) will constitute the majority of the talk: the solution of unusual problems by means of special circuitry will be the theme. The concluding section will concern applications to which rms measurements are well suited.

ALUMINAS?

Wesgo offers virtually unlimited capability in the production of quality alumina ceramics to precision tolerances.

Wesgo aluminas set the standard for excellence in quality ceramics. They are strong, hard and abrasion resistant—offering high thermal conductivity, exceptional chemical inertness and superior electrical properties at microwave frequencies.

Shape and form of Wesgo alumina ceramics are limited only by your requirements. May we send you our latest brochure?

MIT STATION TOUR

The East Bay Subsection plans a tour of the MIT Lincoln Laboratory space communications station at Camp Parks near Pleasanton on May 19, conducted by the site manager, Dick Locke. He also will discuss activities there, including participation in Project Westford, the controversial belt of "needles" orbiting the earth, laser communications R&D, and general space communications studies.

Due to space limitations, attendance will be limited to the first 35 making reservations for the tour no later than May 15 by calling Winnie Veedor, 843-2740, ext. 5434, or Carole Marino, 447-1100, ext. 8064.

To reach the communication station, enter the main (West) gate of Camp Parks on Dougherty Road one mile east of Dublin on Highway 50. After entering the gate, go straight ahead for one mile to the first sign marked "MIT Field Site," then follow the signs.

MEASUREMENT FORUM

PROGRAM—1:00 TO 4:00 P.M.

1:00 P.M.—"Derivation of Electrical Units from Fundamental Standards," an illustrated discussion of the physical laws and experiments that form a uniting basis for electrical measurements of current, voltage and resistance.

2:00 P.M.—"New Concepts in Electrical Measurements," an illustrated presentation of design concepts in resistance, capacitance, voltage and dc and ac ratio measurements which create unique capabilities in traceability and high speed reliability determinations. Describes and reviews applications of the measurement package recently purchased by the U. S. Air Force world-wide network of Precision Measurement Equipment Laboratories.

5-MINUTE NEW PRODUCT VIGNETTES

Portametric PVB (Potentiometric Voltmeter Bridge)—a complete five-dial dc measurement facility in one battery-operated portable instrument.

Portable Capacitance Bridge—0.1% accuracy, battery-operated transformer arm bridge, 0 to 1.2 microfarads in four ranges, for field or production line measurement of two- or three-terminal capacitance.

Packaged Resistors—initial accuracy to $\pm 0.0015\%$, yearly stability to ± 20 ppm, temperature coefficient to $0 + 1$ ppm/ $^{\circ}$ C.

ALSO—state-of-the-art resistance and capacitance measurement with automatic data logging . . . Equipment and measurement demonstrations of impedance, voltage, ac ratio, dc ratio, resistance and capacitance.

MORE SYNCHRONIZATION

address the PTG chapter on Information Theory on May 28.

Discussing self-synchronization in the presence of noise, Dr. Neumann will consider the effects upon a communication system of transient errors of any kind, simple or catastrophic, anywhere in the system. Techniques by which the decoder is able to re-synchronize itself rapidly following arbitrary errors, thereby resuming correct operation after a short delay, will be covered. Various types of codes, including block codes (such as comma-free codes), variable-length codes (especially prefix codes), and sequential codes, will be considered.

The speaker is a graduate of Harvard University and Technische Hochschule, Darmstadt. He joined Bell in 1960, in research in digital systems.

meeting ahead

BUBBLY R&D

The technical aspects of California wine, including compatibility and reliability, will occupy members of the Santa Clara Valley Subsection and their ladies when they attend a dinner and plant tour of Paul Masson Vineyards, off Pierce Rd. in Saratoga, on June 10. Telephone reservations required; call Mrs. Jenny George at 735-2226.

NEW From WILTRON I. F. PHASEMETER

Make fast, accurate phase and amplitude readings with 0.1° resolution for full 360° coverage. Voltage Output proportional to phase and to level with app. 1 ms response time.

Absolute phase accuracy of 1° plus 1% of reading. Continuous frequency coverage of 2.5 Mc to 400 Mc. 100 μv sensitivity. For demonstration call:

FORUM

Time ... Talent ...
Tact and Desire

The problem facing engineer and potential employer is one primarily of Time. Time to seek out the opportunity or the man ... time to contact or be contacted ... time to interview or be interviewed ... time to plan and time to make a decision.

Forum buys you this Time. Forum has the engineering oriented counselors with the talent to evaluate a man and his potential. Forum has the tact to conduct all of its work in the strictest confidence and Forum has the desire to place professional people with equally professional firms.

If you are currently employed, have two or more years experience, and earning in excess of \$8,000, let us take the time to move you ahead.

STUDENT PAPER WINNERS

Winners of the 1964 San Francisco Section Student Paper Contest have been announced by E. H. Hulse and Dick Honey, co-chairmen of the education and student relations committee.

Stipends for both the graduate and undergraduate segments of the contest are first prize, \$75; second prize, \$50; and third prize, \$25. In addition, winners received authorization for one year's dues in the IEEE.

Graduate winners were Jerome D. Harr, University of Santa Clara, first prize, "An adaptive digital-to-analog converter"; Lt. Richard G. Camacho, U.S. Naval Postgraduate School, Monterey, second prize, "Power amplification with gate turn-off controlled rectifier"; and V. Leo Rideout, Stanford University, third prize, "Second place in the weather race."

Undergraduate winners were Dan P. Hunt, University of Nevada, first prize, "An introduction to magnetic field suspension"; Bruce McGregor, San Jose State College, second prize, "Design considerations in the air shower experiment"; and Lloyd R. Shipman, Jr., University of Santa Clara, third prize, "Numerical analysis of elliptic loop antennas."

DEVELOPMENTS IN APPLICATION OF COMPUTERS TO NETWORK THEORY

At the March meeting of the PTC on Circuit Theory chapter, Donald A. Calahan, visiting assistant professor at University of California at Berkeley, delivered a talk entitled "Recent Development in the Application of Computers to Network Theory."

Within the past two years differential equations have been derived which describe the variation of parameters of a network under which various driving point and transfer immitances of a network can be held fixed. These equations are highly non-linear

and with a present state of knowledge do not appear to be analytically solvable. However, with the use of a computer many interesting and useful new networks can be generated using the differentiation equations. In particular, Professor Calahan has been able to develop filters which consist of non-uniformly distorted ladder networks incorporating wide ranges of losses and element values. He has also been able to apply his techniques to generate tables of active RC filter designs which can accommodate transistors with rather arbitrary betas. From a practical point of view, the problem of immediate interest is to generate exhaustive tables of element values for lossy filters. The most interesting theoretical problem is the detailed study of the differential equations used and the properties of their solutions.

IVAN T. FRISCH

MORE ANNUAL MEETING

great deterrent in the coming years as engineers, architects, government, and corporations meet with the public to hammer out solutions to the conflict between expediency and esthetics.

Finley Carter will hit this point from first-hand experience; he has long been a leader in civic affairs as well as a prime mover in engineering circles. Like many (but not enough) engineers, he has served his own property owners association on committees which must face up to the esthetics versus progress controversy. With this background, Carter does not believe in abdicating the solutions to Washington or Sacramento.

There are plenty of problems for electrical engineers in this area, according to Carter. In addition to power and communications circuit construction, there are forests of receiving antennas, unsightly transmitting antennas, poor lighting, air pollution, and poor acoustics—and these are but a few areas where California EE's have done a functional but not an esthetic job. In Carter's view this is incomplete engineering; it does not "look beyond the expedient to the esthetic."

Rounding out the eventful evening (see Meeting Calendar) will be presentation of Fellow awards, introduction of new officers, and voting on adoption of the new by-laws.

Gertsch CRB bridges measure both in-phase and quadrature voltage ratios —with high accuracy

MODEL CRB-8

Complex Ratio Bridges are ideal for precision voltage and phase comparisons between signal and reference vectors. Instruments are designed for testing transformers, tach-generators, rate gyros, all types of transducers, AC amplifiers, AC networks, and AC systems. All CRB instruments feature self-contained, phase-sensitive null indicators.

Model CRB-8 — a **new broad-band bridge** providing continuous frequency coverage from 350-5100 cps—with no plug-ins. Instrument measures angles as small as $.001^\circ$, and is accurate to $.001\%$ (10ppm). 6-digit readouts are provided for both in-phase and quadrature ratios. Loading on the device under test is virtually eliminated by extremely high signal input impedance — better than 20,000 megohms at null.

A wide variety of CRB instruments is available in both cabinet and rack mounted designs. Compact all-transistorized units feature accuracies to $.005\%$. A militarized model is certified per MIL-T-21200 . . . meets stringent environmental requirements. Gertsch also manufactures an automatic complex ratio bridge which displays both in-phase and quadrature ratios on 5-place Nixie readouts.

Write for complete literature on the CRB line.

FOR MEASUREMENTS OF

Inductance

Type 1632-A Inductance Bridge . . . \$950

The ideal bridge for rapid, precise L and G measurements, and for calibration of inductance standards

It has a wide range, 0.0001 μ h to 1111 h, with 0.1% direct-reading accuracy and six-figure resolution. Contains easy, fool-proof readout with in-line decade readings and indicated decimal points. Measures series or parallel inductance; circuits and instructions are engraved on its panel. Designed for use at 1 kc and lower, but usable to 10 kc. External generator and null detector required.

Type 1633-A Incremental-Inductance Bridge . . . \$1050

An invaluable tool for measuring magnetic properties of silicon steel, magnetic alloys, ferrites, chokes, transformers, and filters

Accurately and conveniently measures inductance under different conditions of dc and ac excitation. These incremental inductance measurements can be made while the inductor is operating in the circuit. Accuracy of $\pm 1\%$ for L; $\pm 2\%$ for R and Q. Has wide impedance ranges: L — 0.1 μ h to 1000 h; R — 10 m Ω to 1 M Ω . Indicates Q or R of inductor directly at any of nine frequencies between 50 c and 15.75 kc. Accepts applied signal of up to 1250 v (ac or dc) at 7 amps; up to 50 amps with Type 1633-P1 Range-Extension Unit (\$125).

COMPLETE SYSTEMS

. . . for measuring the inductance and loss of coils with ferromagnetic cores at high dc and ac excitation levels. Each assembly includes a bridge, two 200-voltampere power supplies, rack, and interconnecting cables.

Type 1630-AL Inductance-Measuring Assembly . . . \$2660

For 60-cycle measurements

Contains: Type 1633-A Incremental-Inductance Bridge
Type 1265-A Adjustable DC Power Supply
Type 1266-A Adjustable AC Power Supply

Type 1630-AV Inductance-Measuring Assembly . . . \$3450

For measurements at 9 frequencies from 50 c to 15.75 kc

Contains: Type 1633-A Incremental-Inductance Bridge
Type 1265-A Adjustable DC Power Supply
Type 1308-A Audio Oscillator and Power Amplifier

Write for complete information on any of these instruments
